

ANDHRA PRADESH STATE COUNCIL OF HIGHER EDUCATION

(A Statutory body of the Government of Andhra Pradesh)

3rd,4th and 5th floors, Neeladri Towers,Sri Ram Nagar,6th Battalion Road, Atmakur(V),Mangalagiri(M), Guntur-522 503, Andhra Pradesh **Web**:www.apsche.org **Email**: acapsche@gmail.com

REVISED SYLLABUS OF B.Sc. (Computer Science)

UNDER CBCS FRAMEWORK WITH EFFECT FROM 2023-2024

PROGRAMME: FOUR-YEAR B.Sc.

(B.Sc. Computer Science)

(With Learning Outcomes, Unit-wise Syllabus, References, Co-curricular Activities)

(For ALL Semesters)

(To be Implemented from 2023-24 Academic Year)

Computer Science

PROGRAMME: FOUR-YEAR B.Sc.

REVISED SYLLABUS OF B.Sc. (Computer Science)

Sem	Major/M inor	Paper Code	Subject	Hrs. per Week	Credits	IA	ES	Total
II	Major/M	C201	Problem Solving using C	3	3	25	75	100
	inor	C201P	Problem Solving using C Lab	2	1		50	50
	Major	C202	Digital Logic Design	3	3	25	75	100
		C202P	Digital Logic Design Lab	2	1		50	50
III	Major/M inor	C301	Object Oriented Programming using Java	3	3	25	75	100
		C301P	Object Oriented Programming using Java Lab	2	1		50	50
	Major	C302	Data Structures using C	3	3	25	75	100
		C302P	Data Structures using C Lab	2	1		50	50
	Major	C303	Computer Organization	3	3	25	75	100
		C303P	Computer Organization Lab	2	1		50	50
	Major	C304	Operating Systems	3	3	25	75	100
	, and the second	C304P	Operating Systems Lab	2	1		50	50
IV	Major/M inor	C401	Database Management System	3	3	25	75	100
		C401P	Database Management System Lab	2	1		50	50
	Major/M inor	C402	Object Oriented Software Engineering	3	3	25	75	100
		C402P	Object Oriented Software Engineering Lab	2	1		50	50
	Major	C403	Data Communications and Computer Networks	3	3	25	75	100
Note		C403P	Data Communications and Computer Networks Lab	2	1		50	50

Note Students of Major Discipline have to Opt 2 Pairs (A&B or B&C or A&C) out of the 3 Pairs of courses (A, B, C) given.

Students of Minor Discipline have to choose 1 Pair (either A or B or C) in Semester V

Computer Science

V	Major/M inor	C501A	Web Interface Designing Technologies	3	3	25	75	100

SEMESTER-II

Course 201: Problem Solving using C

(Hours/Week: 03 Total Hours: 45 Credits:03)

Course Objectives

- 1. To explore basic knowledge on computers
- 2. Learn how to solve common types of computing problems.
- 3. Learn to map problems to programming features of C.
- 4. Learn to write good portable C programs.

Course Outcomes

Upon successful completion of the course, a student will be able to:

- 1. Understand the working of a digital computer and Fundamental constructs of Programming
- 2. Analyzeand develop a solution to a given problem with suitable control structures
- 3. Apply the derived data types in program solutions
- 4. Use the 'C' language constructs in the right way
- 5. Apply the Dynamic Memory Management for effective memory utilization

UNIT-I

Introduction to computer and programming: Introduction, Basic block diagram and functions of various components of computer, Concepts of Hardware and software, Types of software, Compiler and interpreter, Concepts of Machine level, Assembly level and high-level programming, Flowcharts and Algorithms

Fundamentals of C:History of C, Features of C, C Tokens-variables and keywords and identifiers, constants and Data types, Rules for constructing variable names, Operators, Structure of C program, Input /output statements in C-Formatted and Unformatted I/O

UNIT-II

Computer Science

Control statements: Decision making statements: if, if else, else if ladder, switch statements. Loop control statements: while loop, for loop and do-while loop. Jump Control statements: break, continue and goto.

UNIT-III

Derived data types in C:Arrays: One Dimensional arrays - Declaration, Initialization and Memory representation; Two Dimensional arrays -Declaration, Initialization and Memory representation.

Strings: Declaring & Initializing string variables; String handling functions, Character handling functions

UNIT-IV

Functions: Function Prototype, definition and calling. Return statement. Nesting of functions. Categories of functions. Recursion, Parameter Passing by address & by value. Local and Global variables. **Storage classes**: automatic, external, static and register.

Pointers: Pointer data type, Pointer declaration, initialization, accessing values using pointers. Pointer arithmetic. Pointers and arrays, pointers and functions.

UNIT-V

Dynamic Memory Management: Introduction, Functions-malloc, calloc, realloc, free **Structures:** Basics of structure, structure members, accessing structuremembers, nested structures, array of structures, structure and functions, structures and pointers. **Unions** - Union definition; difference between Structures and Unions.

Text Books:

- 1. E. Balagurusamy, "Programming in ANSIC", Tata McGraw Hill, 6th Edn, ISBN-13: 978-1-25-90046-2
- 2. Herbert Schildt, —Complete Reference with C, Tata McGraw Hill, 4th Edn., ISBN- 13: 9780070411838, 2000

Computer Science

3. Computer fundamentals and programming in C, REEMA THAREJA, OXFORD UNIVERSITY PRESS

Reference Books

- 1. E Balagurusamy, COMPUTING FUNDAMENTALS & C PROGRAMMING Tata McGraw-Hill, Second Reprint 2008, ISBN 978-0-07-066909-3.
- 2. Ashok N Kamthane, Programming with ANSI and Turbo C, Pearson Edition Publ, 2002.
- 3. Henry Mullish&HuubertL.Cooper: The Spirit of C An Introduction to modern Programming, Jaico Pub. House,1996.
- 4. Y kanithkar, let us C BPB, 13 th edition-2013, ISBN:978-8183331630,656 pages.

SUGGESTED CO-CURRICULAR ACTIVITIES& EVALUATION METHODS:

Unit 1: Activity: Quiz on computer hardware and software concepts

Evaluation Method: Objective-based quiz assessing knowledge and understanding

Unit 2: Activity: Problem-solving using Decision-Making Statements

Evaluation Method:Correctness of decision-making logic

Unit 3: Activity: Array and String Program Debugging

Evaluation Method: Identification and correction of errors in code

Unit 4: Activity: Pair Programming Exercise on Functions

Evaluation Method:Collaboration and Code Quality

Unit 5: Activity: Structured Programming Assignment

Evaluation Method: Appropriate use of structures and nested structures

Course201P:Problem Solving using C Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments

Computer Science

- A. Write a program to calculate simple & compound interest
 B. Write a C program to interchange two numbers.
- 2. Find the biggest of three numbers using C.
- 3. Write a c program to find the sum of individual digits of a positive integer.
- 4. A Fibonacci sequence is defined as follows: the first and second terms in the sequence are 0 and 1. Subsequent terms are found by adding the preceding two terms in the sequence.
- 5. Write a c program to check whether a number is Armstrong or not.
- 6. Write a c program to generate all the prime numbers between 1 and n, where n is a value supplied by the user.
- 7. Write a c program that implements searching of given item in given list
- 8. Write a c program that uses functions to perform the following: Addition of two matrices. Multiplication of two matrices.
- 9. Write a program for concatenation of two strings.
- 10. Write a program for length of a string with and without String Handling functions
- 11. Write a program to demonstrate Call by Value and Call by Reference mechanism
- 12. Write a Program to find GCD of Two numbers using Recursion
- 13. Write a c program to perform various operations using pointers.
- 14. Write a c program to read data of 10 employees with a structure of 1.employee id 2.aadar no, 3.title, 4.joined date, 5.salary, 6.date of birth, 7.gender, 8.department.
- 15. Write a Program to demonstrate dynamic arrays using Dynamic Memory Management functions

Computer Science

SEMESTER-II

Course 202: Digital Logic Design

(Hours/Week: 03 Total Hours: 45 Credits:03)

Course Objectives

To familiarize with the concepts of designing digital circuits.

Course Outcomes

Upon successful completion of the course, the students will be able to

- 1. Understand how to Convert numbers from one radix to another radix and perform arithmetic operations.
- 2. Simplify Boolean functions using Boolean algebra and k- maps
- 3. Design adders and subtractors circuits
- 4. Design combinational logic circuits such as decoders, encoders, multiplexers and demultiplexers.
- 5. Use flip flops to design registers and counters.

UNIT - I

Number Systems:Binary, octal, decimal, hexadecimal number systems, conversion of numbers from one radix to another radix, r's, (r-1)'s complements, signed binary numbers, addition and subtraction of unsigned and signed numbers, weighted and unweighted codes.

UNIT - II

Logic Gates and Boolean Algebra: NOT, AND, OR, universal gates, X-OR and X-NOR gates, Boolean laws and theorems, complement and dual of a logic function, canonical and standard

Computer Science

forms, two level realization of logic functions using universal gates, minimizations of logic functions (POS and SOP) using Boolean theorems, K-map (up to four variables), don't care conditions.

UNIT – III

Combinational Logic Circuits – **1:** Design of half adder, full adder, half subtractor, full subtractor, ripple adders and subtractors, ripple adder / subtractor.

UNIT - IV

Combinational Logic Circuits – **2:** Design of decoders, encoders, priority encoder, multiplexers, demultiplexers, higherorder decoders, demultiplexers and multiplexers, realization of Boolean functions using decoders, multiplexers.

UNIT - V

Sequential Logic Circuits: Classification of sequential circuits, latch and flip-flop, RS- latch using NAND andNOR Gates, truth tables, RS, JK, T and D flip-flops, truth and excitation tables, conversion of flip- flops, flip-flops with asynchronous inputs (preset and clear).

Design of registers, shift registers, bidirectional shift registers, universal shiftregister, design of ripple counters, synchronous counters and variable moduluscounters.

Text Books:

1. M. Morris Mano, Michael D Ciletti, "Digital Design", 5th edition, PEA.

Reference Books

- 1. Kohavi, Jha, "Switching and Finite Automata Theory", 3rd edition, Cambridge.
- 2. Leach, Malvino, Saha, "Digital Principles and Applications", 7th edition, TMH.
- 3. 3. Roth, "Fundamentals of Logic Design", 5th edition, Cengage.

SUGGESTED CO-CURRICULAR ACTIVITIES& EVALUATION METHODS:

Computer Science

Unit 1: Activity: JAM (Just a Minute) Session: Explaining Radix Conversion

Evaluation Method: Communication Skills and Knowledge Presentation

Unit 2: Activity: Boolean Algebra Assignment

Evaluation Method: Assignment Completion and Correctness

Unit 3: Activity: Hands-on Lab Activity: Building Adder and Subtractor Circuits
Evaluation Method: Lab Performance and Correctness of Circuit Implementation

Unit 4: Activity: Group Discussion: Applications of Decoders, Encoders, Multiplexers
Evaluation Method: Participation and Critical Thinking

Unit 5: Activity: Quiz on Flip-Flops and Register-Counter Design
Evaluation Method: Quiz Performance and Knowledge Retention

Course202P:Digital Logic Design Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments

The laboratory work can be done by using physical gates and necessary equipment or simulators.

Simulators:https://sourceforge.net/projects/gatesim/ or https://circuitverse.org/ or any free open-source simulator

- Introduction to digital electronics lab- nomenclature of digital ICs, specifications, study of the data sheet, concept of Vcc and ground, verification of the truth tables of logic gates using TTL ICs.
- Implementation of the given Boolean functions using logic gates in both SOP and POS forms
- 3. Realization of basic gates using universal gates.
- 4. Design and implementation of half and full adder circuits using logic gates.
- 5. Design and implementation of half and full subtractor circuits using logic gates.
- 6. Verification of stable tables of RS, JK, T and D flip-flops using NAND gates.
- 7. Verification of stable tables of RS, JK, T and D flip-flops using NOR gates.
- 8. Implementation and verification of Decoder and encoder using logic gates.
- 9. Implementation of 4X1 MUX and DeMUX using logic gates.

Computer Science

- 10. Implementation of 8X1 MUX using suitable lower order MUX.
- 11. Implementation of 7-segment decoder circuit.
- 12. Implementation of 4-bit parallel adder.
- 13. Design and verification of 4-bit synchronous counter.
- 14. Design and verification of 4-bit asynchronous counter.

SEMESTER-III

Course301:Object Oriented Programming using Java

(Hours/Week: 03 Total Hours: 45 Credits:03)

Course Objectives

To introduce the fundamental concepts of Object-Oriented programming and to design & implement object-oriented programming concepts in Java.

Course Outcomes

Upon successful completion of the course, a student will be able to:

- 1. Understand the basic concepts of Object-Oriented Programming and Java Program Constructs
- 2. Implement classes and objects and analyze Inheritance and Dynamic Method Dispatch
- 3. Demonstrate various classes in different packages and can design own packages
- 4. Manage Exceptions and Apply Threads
- 5. Create GUI screens along with event handling

UNIT-I

OOPs Concepts and Java Programming: Introduction to Object-Oriented concepts, procedural and object-oriented programming paradigm

Java programming: An Overview of Java, Java Environment, Data types, Variables, constants, scope and life time of variables, operators, type conversion and casting, Accepting Input from the Keyboard, Reading Input with Java.util.Scanner Class, Displaying Output with System.out.printf(), Displaying Formatted Output with String.format(), Control Statements

Computer Science

UNIT-II

Arrays, Command Line Arguments, Strings-String Class Methods

Classes & Objects:Creating Classes, declaring objects, Methods, parameter passing, static fields and methods, Constructors, and 'this' keyword, overloading methods and access

Inheritance: Inheritance hierarchies, super and subclasses, member access rules, 'super' keyword, preventing inheritance: final classes and methods, the object class and its methods;

Polymorphism: Dynamic binding, method overriding, abstract classes and methods;

UNIT-III

Interface: Interfaces VS Abstract classes, defining an interface, implement interfaces, accessing implementations through interface references, extending interface;

Packages: Defining, creating and accessing a package, understanding CLASSPATH, importing packages.

Exception Handling: Benefits of exception handling, the classification of exceptions, exception hierarchy, checked exceptions and unchecked exceptions, usage of try, catch, throw, throws and finally, rethrowing exceptions, exception specification, built in exceptions, creating own exception sub classes.

UNIT-IV

Multithreading: Differences between multiple processes and multiple threads, thread states, thread life cycle, creating threads, interrupting threads, thread priorities, synchronizing threads, inter thread communication.

Stream based I/O (java.io) – The Stream classes-Byte streams and Character streams, Reading console Input and Writing Console Output, File class, Reading and writing Files, The Console class, Serialization

UNIT-V

GUI Programming with Swing- Introduction, MVCarchitecture, components, containers. Understanding Layout Managers - Flow Layout, BorderLayout, Grid Layout, Card Layout, Grid Bag Layout.

Computer Science

Event Handling- The Delegation event model- Events, Event sources, Event Listeners, Eventclasses, Handling mouse and keyboard events, Adapter classes, Inner classes, Anonymous Inner classes.

Text Books:

- 1. Java The complete reference, 9th edition, Herbert Schildt, McGraw Hill.
- 2. Understanding Object-Oriented Programming with Java, updated edition, T. Budd, PearsonEducation.

Reference Books

- 1. Cay S. Horstmann, "Core Java Fundamentals", Volume 1, 11 th Edition, Prentice Hall, 2018.
- 2. Paul Deitel, Harvey Deitel, "Java SE 8 for programmers", 3rd Edition, Pearson, 2015.
- 3. S. Malhotra, S. Chudhary, Programming in Java, 2nd edition, Oxford Univ. Press.

SUGGESTED CO-CURRICULAR ACTIVITIES& EVALUATION METHODS:

- Unit 1: Activity: Quiz on Object-Oriented Programming Concepts and Java Constructs
 Evaluation Method: Quiz Performance and Knowledge Retention
- Unit 2: Activity: Object-Oriented Programming Assignment: Class Implementation Evaluation Method: Assignment Completion and Correctness
- Unit 3: Activity: Hands-on Lab Activity: Creating and Using Custom Java PackagesEvaluation Method: Lab Performance and Correctness of Code Implementation
- Unit 4: Activity: Case Study Discussion on where multi-threading is crucialEvaluation Method: Critical thinking, problem-solving, and presentation skills.
- Unit 5: Activity: GUI design contest using Java Swings
 Evaluation Method: GUI design, Visual appearance and user friendliness, usability, and adherence to event handling principles.

Computer Science

Course301P:Object Oriented Programming using Java Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments

- 1. Write a Java program to print Fibonacci series using for loop.
- 2. Write a Java program to calculate multiplication of 2 matrices.
- 3. Create a class Rectangle. The class has attributes length and width. It should have methods that calculate the perimeter and area of the rectangle. It should have read Attributes method to read length and width from user.
- 4. Write a Java program that implements method overloading.
- 5. Write a Java program for sorting a given list of names in ascending order.
- 6. Write a Java program that displays the number of characters, lines and words in a text file.
- 7. Write a Java program to implement various types of inheritance
 - i. Single
- ii. Multi-Level
- iii. Hierarchical
- iv. Hybrid
- 8. Write a java program to implement runtime polymorphism.
- 9. Write a Java program which accepts withdraw amount from the user and throws an exception "In Sufficient Funds" when withdraw amount more than available amount.
- 10. Write a Java program to create three threads and that displays "good morning", for every one second, "hello" for every 2 seconds and "welcome" for every 3 seconds by using extending Thread class.
- 11. Write a Java program that creates three threads. First thread displays "OOPS", the second thread displays "Through" and the third thread Displays "JAVA" by using Runnable interface.
- 12. Implement a Java program for handling mouse events when the mouse entered, exited, clicked, pressed, released, dragged and moved in the client area.

Computer Science

- 13. Implement a Java program for handling key events when the key board is pressed, released, typed.
- 14. Write a Java swing program that reads two numbers from two separate text fields and display sum of two numbers in third text field when button "add" is pressed.
- 15. Write a Java program to design student registration form using Swing Controls. The form which having the following fields and button SAVE

Form Fields are: Name, RNO, Mailid, Gender, Branch, Address.

SEMESTER-III

Course302:Data Structures Using C

(Hours/Week: 03 Total Hours: 45 Credits:03)

Course Objectives

To introduce the fundamental concept of data structures and to emphasize the importance of various data structures in developing and implementing efficient algorithms.

Course Outcomes

Upon successful completion of the course, a student will be able to:

- 1. Understand various Data Structures for data storage and processing.
- 2. RealizeLinked List Data Structure for various operations
- 3. Analyze step by step and develop algorithms to solve real world problems by implementing Stacks, Queues data structures.
- 4. Understand and implement various searching & sorting techniques.
- 5. Understand the Non-Linear Data Structures such as Binary Trees and Graphs

UNIT-I

Basic Concepts: Pointers and dynamic memory allocation, Algorithm-Definition and characteristics, Algorithm Analysis-Space Complexity, Time Complexity, Asymptotic Notation **Introduction to Data structures:** Definition, Types of Data structure, Abstract Data Types (ADT), Difference between Abstract Data Types, Data Types, and Data Structures.

Arrays-Concept of Arrays, Single dimensional array, Two dimensional array, Operations on arrays with Algorithms (searching, traversing, inserting, deleting)

ANDHRA PRADESH STATE COUNCIL FOR HIGHER EDUCATION

FOUR YEAR B.SC. (HONS) SYLLABUS UNDER CBCS W.E.F. 2023-2024

Computer Science

UNIT-II

Linked List: Concept of Linked Lists, Representation of linked lists in Memory, Comparison

between Linked List and Array, Types of Linked Lists - Singly Linked list, Doubly Linked list,

Circularly Singly Linked list, Circularly Doubly Linked list;

Implementation of Linked List ADT: Creating a List, Traversing a linked list, Searching

linked list, Insertion and deletion into linked list (At first Node, Specified Position, Lastnode),

Application of linked lists

UNIT-III

Stacks: Introduction to stack ADT, Representation of stacks with array and Linked List,

Implementation of stacks, Application of stacks - Polish Notations - Converting Infix to Post Fix

Notation - Evaluation of Post Fix Notation - Tower of Hanoi, Recursion: Concept and

Comparison between recursion and Iteration

Queues: Introduction to Queue ADT, Representation of Queues with array and Linked List,

Implementation of Queues, Application of Queues Types of Queues- Circular Queues, De-

queues, Priority Queue

UNIT-IV

Searching: Linear or Sequential Search, Binary Search and Indexed Sequential Search

Sorting: Selection Sort, Bubble Sort, Insertion Sort, Quick Sort and Merge Sort

UNIT-V

Binary Trees: Concept of Non- Linear Data Structures, Introduction Binary Trees, Types of

Trees, Basic Definition of Binary Trees, Properties of Binary Trees, Representation of Binary

Trees, Operations on a Binary Search Tree, Binary Tree Traversal, Applications of Binary Tree.

Graphs: Introduction to Graphs, Terms Associated with Graphs, Sequential Representation of

Graphs, Linked Representation of Graphs, Traversal of Graphs (DFS, BFS), Application of

Graphs.

Computer Science

Text Books:

- 1. Horowitz and Sahani, "Fundamentals of Data Structures", Galgotia Publications Pvt Ltd Delhi India.
- 2. A.K. Sharma ,Data Structure Using C, Pearson Education India.
- 3. "Data Structures Using C" Balagurusamy E. TMH

Reference Books

- 1. "Data Structures through C", Yashavant Kanetkar, BPB Publications
- 2. Rajesh K. Shukla, "Data Structure Using C and C++" Wiley Dreamtech Publication.
- 3. Lipschutz, "Data Structures" Schaum's Outline Series, Tata Mcgraw-hill Education (India) Pvt. Ltd .
- 4. Michael T. Goodrich, Roberto Tamassia, David M. Mount "Data Structures and Algorithms in C++", Wiley India.

SUGGESTED CO-CURRICULAR ACTIVITIES& EVALUATION METHODS:

Unit 1: Activity: Algorithm analysis exercises

Evaluation Method:Programming Assignment and Correctness

Unit 2: Activity: Presentations on real-life applications of linked lists

Evaluation Method:Presentationskills or reports

Unit 3: Activity: Role-playing activities for stack operations

Evaluation Method:Problem-solving skills, communication and collaboration abilities.

Unit 4: Activity: Sorting algorithm analysis and comparison activities

Evaluation Method:Performance analysis and presentation.

Unit 5: Activity: Case Study on Applications of Graphs

Evaluation Method:Critical thinking, problem-solving, and presentation skills

Course302P:Data Structures Using C Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

Computer Science

- 1. Write a program to read 'N' numbers of elements into an array and also perform the following operation on an array
 - a. Add an element at the beginning of an array
 - b. Insert an element at given index of array
 - c. Update an element using a values and index
 - d. Delete an existing element
- 2. Write Program to implement Single Linked List with insertion, deletion and traversal operations
- 3. Write Program to implement Circular doubly Linked List with insertion, deletion and traversal operations
- 4. Write Programs to implement the Stack operations using an array
- 5. Write a program using stacks to convert a given infix expression to postfix
- 6. Write Programs to implement the Stack operations using Liked List.
- 7. Write Programs to implement the Queue operations using an array.
- 8. Write Programs to implement the Queue operations using Liked List.
- 9. Write a program for Binary Search Tree Traversals
- 10. Write a program to search an item in a given list using the following Searching Algorithms
 - a. Linear Search
 - b. Binary Search.
- 11. Write a program for implementation of the following Sorting Algorithms
 - a. Bubble Sort
 - b. Insertion Sort
 - c. Quick Sort

Computer Science

SEMESTER-III

Course303: Computer Organization

(Hours/Week: 03 Total Hours: 45 Credits:03)

Course Objectives

To familiarize with organizational aspects of memory, processor and I/O.

Course Outcomes

Upon successful completion of the course, the students will be able to

- 1. Identify different types of instructions
- 2. Differentiate between micro-programmed and hard-wired control units.
- 3. Analyse the performance of hierarchical organization of memory.
- 4. Summarize different data transfer techniques.
- 5. Demonstrate arithmetic operations on fixed- and floating-point numbers and illustrate concepts of parallel processing.

UNIT - I

Register Transfer Language and Micro Operations: Introduction- Functional units, computer registers, register transfer language, register transfer, bus and memory transfers, arithmetic, logic and shift micro-operations, arithmetic logic shift unit.

Basic Computer Organization and Design: Instruction codes, instruction cycle.

Register reference instructions, Memory – reference instructions, input – output and interrupt.

ANDHRA PRADESH STATE COUNCIL FOR HIGHER EDUCATION

FOUR YEAR B.SC. (HONS) SYLLABUS UNDER CBCS W.E.F. 2023-2024

Computer Science

CPU and Micro Programmed Control: Central Processing unit: Introduction, instruction formats, addressing modes.

Control memory, address sequencing, design of control unit - hard wired control, micro programmed control.

UNIT – III

Memory Organization: Memory hierarchy, main memory, auxiliary memory, associative memory, cache Memory and mappings.

UNIT - IV

Input-Output Organization: Peripheral Devices, input-output interface, asynchronous data transfer, modes of transfer- programmed I/O, priority interrupt, direct memory access, Input – Output Processor (IOP).

UNIT - V

Computer Arithmetic and Parallel Processing: Data representation- fixed point, floating point, addition and subtraction, multiplication and division algorithms.

Parallel Processing-Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction Pipeline.

Text Books:

1. M. Moris Mano, "Computer Systems Architecture", 3rd edition, Pearson/PHI.

Reference Books:

- Carl Hamacher, ZvonksVranesic, SafeaZaky, "Computer Organization", 5th edition, McGraw Hill.
- 2. William Stallings, "Computer Organization and Architecture", 8th edition, Pearson/PHI.

SUGGESTED CO-CURRICULAR ACTIVITIES& EVALUATION METHODS:

Unit 1: Activity: Quiz competition on micro-operations.

Evaluation Method: Accuracy and speed in answering quiz questions.

Computer Science

Unit 2: Activity: Instruction Format Puzzle: Solving a puzzle to decode and understand instruction

formats.

Evaluation Method: Accuracy and speed in completing the puzzle.

Unit 3: Activity: Memory Hierarchy Poster: Creating informative posters or infographics on memory hierarchy.

Evaluation Method:Clarity of information, presentation and creativity of visual design.

Unit 4: Activity: I/O Troubleshooting Challenge

Evaluation Method:problem identification, feasibility of proposed solutions, and clarity of explanations.

Unit 5: Activity: Case Study on Parallel processing architecture.

Evaluation Method:Understanding of parallel processing concepts and architectures.

Course303P:Computer Organization Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

Lab Experiments

- 1. Implement a C program to convert a Hexadecimal, octal, and binary number to decimal number vice versa.
- 2. Implement a C program to perform Binary Addition & Subtraction.
- 3. Implement a C program to perform Multiplication of two binary numbers.
- 4. Implement arithmetic micro-operations using logic gates.
- 5. Implement logic and shift micro-operations using logic gates.
- 6. Implement a C program to perform Multiplication of two binary numbers (signed) using Booth's Algorithms.
- 7. Implement a C program to perform division of two binary numbers (Unsigned) using restoring division algorithm.
- 8. Implement a C program to perform division of two binary numbers (Unsigned) using non-restoring division algorithm.
- 9. Write assembly language code for A+B*(C-D) using various instruction formats in MASM

Computer Science

or any open-source assembler.

10. Write assembly language code for A+B*C using various addressing modes in MASM or any open-source assembler.

Computer Science

SEMESTER-III

Course304:Operating Systems

(Hours/Week: 03 Total Hours: 45 Credits:03)

Course Objectives

To gain knowledge about various functions of an operating system like memory management, process management, device management, etc.

Course Outcomes:

Upon successful completion of the course, a student will be able to:

- 1. Demonstrate knowledge and comprehension of operating system functions.
- 2. Analyze different process scheduling algorithms and apply them to manage processes and threads effectively
- 3. Create strategies to prevent, detect, and recover from deadlocks, and design solutions for inter-process communication and synchronization problems.
- 4. Compare and contrast different memory allocation strategies and evaluate their effectiveness
- 5. Evaluate disk scheduling algorithms while implementing OS security measures

UNIT-I

What is Operating System? History and Evolution of OS, Basic OS functions, Resource Abstraction, Types of Operating Systems– Multiprogramming Systems, Batch Systems, Time Sharing Systems; Operating Systems for Personal Computers, Workstations and Hand-held Devices, Process Control & Real time Systems.

UNIT-II

Processor and User Modes, Kernels, System Calls and System Programs, System View of the Process and Resources, Process Abstraction, Process Hierarchy, Threads, Threading Issues, Thread Libraries; Process Scheduling-Non-Preemptive and Preemptive SchedulingAlgorithms.

UNIT III

Computer Science

Process Management: Deadlock, Deadlock Characterization, Necessary and SufficientConditions for Deadlock, Deadlock Handling Approaches: Deadlock Prevention, DeadlockAvoidance and Deadlock Detection and Recovery.

Concurrent and Dependent Processes, Critical Section, Semaphores, Methods for Interprocess Communication; Process Synchronization, Classical Process SynchronizationProblems: Producer-Consumer, Reader-Writer.

UNIT IV

Memory Management: Physical and Virtual Address Space; Memory Allocation Strategies—Fixed and -Variable Partitions, Paging, Segmentation, Virtual Memory.

UNIT V

File and I/O Management, OS security: Directory Structure, File Operations, FileAllocation Methods, Device Management, Pipes, Buffer, Shared Memory, Disk Scheduling algorithms.

Text Books:

 Operating System Principles by Abraham Silberschatz, Peter Baer Galvin and Greg Gagne (7th Edition) Wiley India Edition.

Reference Books

- 1. Operating Systems: Internals and Design Principles by Stallings (Pearson)
- 2. Operating Systems by J. Archer Harris (Author), Jyoti Singh (Author) (TMH)

SUGGESTED CO-CURRICULAR ACTIVITIES& EVALUATION METHODS:

Unit 1: Activity: Case Study on a specific Operating System: highlighting its functions and key features.

Evaluation Method: Case study presentation, depth of understanding of operating system functions, and ability to articulate key concepts.

Unit 2: Activity: Comparison Poster on Scheduling Algorithms

Evaluation Method: Assessment of posters based on content accuracy, clarity of information, visual presentation, and ability to convey key insights.

Computer Science

Unit 3: Activity: Assignment on Dead Lock prevention techniques

Evaluation Method: Understanding, Completion and report.

Unit 4: Activity: Debate on various Memory allocation schemes

Evaluation Method: Debate arguments, ability to counter opposing viewpoints, logical reasoning, and presentation skills.

Unit 5: Activity: Comparative study of various disk scheduling algorithms using real world datasets

Evaluation Method: Analysis methodology, accuracy of results, and presentation of findings and conclusions.

Course304P:Operating Systems Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

- 1. Illustrate the LINUX commands
 - a) pwd
 - b) mkdir
 - c) rmdir
 - d) grep
 - e) chmod
 - f) ls
 - g) rm
 - h) cp
- 2. Write a program to calculate average waiting time and turn around time of each process using the following CPU Scheduling algorithm for the given process schedules.
 - a) FCFS
 - b) SJF
 - c) Priority
 - d) Round Robin
- 3. Simulate MVT and MFT memory management techniques
- 4. Write a program for Bankers Algorithm for Dead Lock Avoidance

Computer Science

- 5. Implement Bankers Algorithm Dead Lock Prevention.
- 6. Write a program to simulate Producer-Consumer problem.
- 7. Simulate all Page replacement algorithms.
 - e) FIFO
 - f) LRU
 - g) LFU
 - h) Optimal
- 8. Simulate Paging Techniques of memory management
- 9. Simulate the following disk scheduling algorithms
 - a) FCFS
 - b) SSTF
 - c) SCAN
 - d) CSCAN

Computer Science

SEMESTER-IV

Course 401: Database Management Systems

(Hours/Week: 03 Total Hours: 45 Credits:03)

Learning Objectives:

To familiarize with concepts of database design

Learning Outcomes: On successful completion of the course, students will be able to

- 1. Differentiate between database systems and file based systems
- 2. Design a database using ER model
- 3. Use relational model in database design
- 4. Use SQL commands for creating and manipulating data stored in databases.
- 5. Write PL/SQL programs to work with databases.

UNIT-I

Overview of Database Management System: Introduction to data, information, database, database management systems, file-based system, Drawbacks of file-Based System, databaseapproach, Classification of Database Management Systems, advantages of database approach, Various Data Models, Components of Database Management System, three schemaarchitecture of database, costs and risks of database approach.

UNIT - II

Entity-Relationship Model: Introduction, the building blocks of an entity relationshipdiagram, classification of entity sets, attribute classification, relationship degree, relationshipclassification, reducing ER diagram to tables, enhanced entity-relationship model (EERmodel), generalization and specialization, **IS A** relationship and attribute inheritance, multiple inheritance, constraints on specialization and generalization, advantages of ERmodeling.

UNIT - III

Relational Model: Introduction, CODD Rules, relational data model, concept of key, relational integrity, relational algebra, relational algebra operations, advantages of relational algebra,

Computer Science

limitations of relational algebra, relational calculus, tuple relational calculus, domainrelational Calculus (DRC), Functional dependencies and normal forms upto 3rdnormal form.

UNIT - IV

Structured Query Language: Introduction, Commands in SQL,Data Types in SQL, Data Definition Language, Selection Operation, Projection Operation,Aggregate functions, Data Manipulation Language, Table Modification Commands, JoinOperation, Set Operations, View, Sub Query.

UNIT - V

PL/SQL: Introduction, Shortcomings of SQL, Structure of PL/SQL, PL/SQL LanguageElements, Data Types, Operators Precedence, Control Structure, Steps to Create a PL/SQL,Program, Iterative Control, Procedure, Function, Database Triggers, Types of Triggers.

Text Books:

 Operating System Principles by Abraham Silberschatz, Peter Baer Galvin and Greg Gagne (7th Edition) Wiley India Edition.

Reference Books

- 1. Database Management Systems by Raghu Ramakrishnan, McGrawhill
- 2. Principles of Database Systems by J. D. Ullman
- 3. Fundamentals of Database Systems by R. Elmasri and S. Navathe
- 4. SQL: The Ultimate Beginners Guide by Steve Tale.

SUGGESTED CO-CURRICULAR ACTIVITIES& EVALUATION METHODS:

Unit 1: Activity: Seminar Presentation on Database Management Systems
Evaluation Method: Depth of research, clarity of explanations, ability to address questions and engage the audience.

Unit 2: Activity: Case Study on EER model

Evaluation Method:Identification of inheritance relationships, effective use of generalization and specialization, and adherence to constraints.

Computer Science

Unit 3: Activity: Exercise on Normalization: Assign students a set of unnormalized tables and have them normalize the tables to third normal form

Evaluation Method: Normalized table designs, identification of functional dependencies, adherence to normalization rules, and elimination of anomalies.

Unit 4: Activity: Competition on SQL Query Writing

Evaluation Method:Query correctness, efficiency, proper use of SQL commands, ability to handle complex scenarios, and creativity in query formulation.

Unit 5: Activity: Peer Review of PL/SQL code

Evaluation Method:Peer evaluation of code quality, adherence to coding standards, proper use of language elements, and logic.

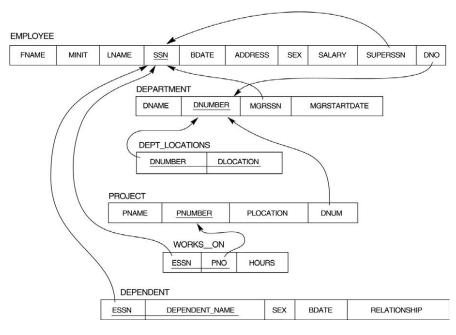

Course401P:Database ManagementSystems Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

- 1. Draw ER diagram for hospital administration
- 2. Creation of college database and establish relationships between tables
- 3. Relational database schema of a company is given in the following figure.

Relational Database Schema - COMPANY

Computer Science

Questions to be performed on above schema

- 1. Create above tables with relevant Primary Key, Foreign Key and other constraints
- 2. Populate the tables with data
- 3. Display all the details of all employees working in the company.
- 4. Display ssn, lname, fname, address of employees who work in department no 7.
- 5. Retrieve the Birthdate and Address of the employee whose name is 'Franklin T. Wong'
- 6. Retrieve the name and salary of every employee
- 7. Retrieve all distinct salary values
- 8. Retrieve all employee names whose address is in 'Bellaire'
- 9. Retrieve all employees who were born during the 1950s
- 10. Retrieve all employees in department 5 whose salary is between 50,000 and 60,000(inclusive)
- 11. Retrieve the names of all employees who do not have supervisors
- 12. Retrieve SSN and department name for all employees
- 13. Retrieve the name and address of all employees who work for the 'Research' department
- 14. For every project located in 'Stafford', list the project number, the controlling department number, and the department manager's last name, address, and birth date.
- 15. For each employee, retrieve the employee's name, and the name of his or her immediate supervisor.
- 16. Retrieve all combinations of Employee Name and Department Name
- 17. Make a list of all project numbers for projects that involve an employee whose last name is 'Narayan' either as a worker or as a manager of the department that controls the project.
- 18. Increase the salary of all employees working on the 'ProductX' project by 15%. Retrieve employee name and increased salary of these employees.
- 19. Retrieve a list of employees and the project name each works in, ordered by the employee's department, and within each department ordered alphabetically by employee first name.

Computer Science

- 20. Select the names of employees whose salary does not match with salary of any employee in department 10.
- 21. Retrieve the employee numbers of all employees who work on project located in Bellaire, Houston, or Stafford.
- 22. Find the sum of the salaries of all employees, the maximum salary, the minimum salary, and the average salary. Display with proper headings.
- 23. Find the sum of the salaries and number of employees of all employees of the 'Marketing' department, as well as the maximum salary, the minimum salary, and the average salary in this department.
- 24. Select the names of employees whose salary is greater than the average salary of all employees in department 10.
- 25. Delete all dependents of employee whose ssn is '123456789'.
- 26. Perform a query using alter command to drop/add field and a constraint in Employee table.

Computer Science

SEMESTER-IV

Course402:Object Oriented Software Engineering

(Hours/Week: 03 Total Hours: 45 Credits:03)

Course Objective:

To introduce Object-oriented software engineering (OOSE) - which is a popular technical approach to analyzing, designing an application, system, or business by applying the object-oriented paradigm and visual modeling.

Course Outcomes:

Upon successful completion of the course, a student will be able to:

- Understand and apply the fundamental principles of Object-Oriented Programming (OOP) concepts and Unified Modeling Language (UML) basics, in the development of software solutions.
- 2. Analyze and specify software requirements, develop use cases and scenarios, apply object-oriented analysis and design (OOAD) principles
- 3. Familiar with the concept of test-driven development (TDD) and its practical implementation
- 4. Analyze and Evaluate Software Maintenance and Evolution Strategies
- 5. Apply Advanced Object-Oriented Software Engineering Concepts

UNIT-I

Introduction to Object-Oriented Programming: Overview of software engineering, Introduction to Object-Oriented Programming (OOP) concepts (classes, objects, inheritance, polymorphism), Unified Modelling Language (UML) basics, Introduction to software development process and software development life cycle (SDLC).

UNIT-II

Computer Science

Requirements Analysis and Design: Requirements analysis and specification, Use cases and scenarios, Object-oriented analysis and design (OOAD), Design patterns, UML modelling techniques (class diagrams, sequence diagrams, state machine diagrams, activity diagrams)

UNIT-III

Software Construction and Testing: Software construction basics, Object-oriented design principles, Object-oriented programming languages (Java, C++, Python), Software testing basics (unit testing, integration testing, system testing), Test-driven development (TDD)

UNIT-IV

Software Maintenance and Evolution: Software maintenance basics, refactoring techniques Software version control, Code review and inspection, Software evolution and reengineering

UNIT-V

Advanced Topics in Object-Oriented Software Engineering: Model-driven engineering (MDE), Aspect-oriented programming (AOP), Component-based software engineering (CBSE), Service-oriented architecture (SOA), Agile software development and Scrum methodologies.

Text Book(s)

- 1. An Introduction to Object-Oriented Analysis and Design and the Unified Process, 3rd Edition, Craig Larman, Prentice-Hall.
- 2. Programming in Java by Sachin Malhotra, Oxford University Press

Reference Books

- 1. Requirements engineering: processes and techniques, G.Kotonya and, I.Sommerville, 1998, Wiley
- 2. Design Patterns, E.Gamma, R. Helm, R. Johnson, and J. Vlissides
- 3. The Unified Modeling Language Reference Manual, J. Rumbaugh, I.Jacobson and G. Booch, Addison Wesley

SUGGESTED CO-CURRICULAR ACTIVITIES& EVALUATION METHODS:

Unit 1: Activity: Group Activity: Design and implement a small OOP project

Computer Science

Evaluation Method:Presentation evaluation rubric, Project evaluation based on OOP principles.

Unit 2: Activity: Use Case Scenario Presentation& Peer Activity: Review and provide feedback on each other's use case diagrams

Evaluation Method: Presentation evaluation rubric, Peer feedback assessment.

Unit 3: Activity: Poster Presentation: Illustrate TDD principles and benefits
Evaluation Method: Poster presentation evaluation

Unit 4: Activity: Peer Activity: Analyze and discuss different maintenance strategies

Evaluation Method: Peer discussion participation evaluation

Unit 5: Activity: Seminar on Design Patterns

Evaluation Method:Depth of research, clarity of explanations, ability to address questions and engage the audience.

Course402P:Object Oriented Software Engineering Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

Suggested Software Tools: StarUML/UMLGraph/Topcased/Umberollo/ArgoUML/ Eclipse IDE, Visual Paradigm for UML/Rational Software Architect/Any other Open Source Tool

List of Experiments:

Select domain of interest (e.g. College Management System) and identify multi-tier software application to work on (e.g. Online Fee Collection). Analyze, design and develop this application using OOSE approach:

- 1. Develop an IEEE standard SRS document. Also develop risk management and project plan (Gantt chart).
- Understanding of System modeling: Data model i.e. ER Diagram and draw the ERDiagramwith generalization, specialization and aggregation of specified problem statement
- 3. Understanding of System modeling: Functional modeling: DFD level 0 i.e. Context Diagramand draw it

Computer Science

- 4. Understanding of System modeling: Functional modeling: DFD level 1 and DFD level 2 and draw it.
- 5. Identify use cases and develop the use case model.
- 6. Identify the business activities and develop an UML Activity diagram.
- 7. Identity the conceptual classes and develop a domain model with UML Class diagram.
- 8. Using the identified scenarios find the interaction between objects and represent them using UML Interaction diagrams.
- 9. Draw the state chart diagram.
- 10. Identify the user interface, domain objects, and technical services. Draw the partial layered, logical architecture diagram with UML package diagram notation.
- 11. Implement the technical services layer.
- 12. Implement the domain objects layer.
- 13. Implement the user interface layer.
- 14. Draw component and deployment diagrams.

Computer Science

SEMESTER-IV

Course403:Data Communication and Computer Networks

(Hours/Week: 03 Total Hours: 45 Credits:03)

Course Objectives

To provide students with a comprehensive understanding of networking principles, protocols, and technologies, enabling them to design, analyze, and evaluate efficient and reliable network solutions.

Course Outcomes

Upon successful completion of the course, a student will be able to:

- 1. Understand and apply network applications, hardware, software, and reference models for network communication.
- 2. Design and analyze data link layer protocols, multiple access protocols, and wireless LAN technologies.
- 3. Design routing algorithms, congestion control algorithms, and evaluate network layer protocols for internetworking.
- 4. Analyze transport service, transport protocols, and evaluate UDP and TCP in the internet.
- 5. Understand and evaluate application layer protocols, including DNS, email, WWW, and network management protocols.

UNIT-I

INTRODUCTION: Network applications, network hardware, network software, reference models: OSI, TCP/IP, Internet, Connection oriented network - X.25, frame relay.

THE PHYSICAL LAYER: Theoretical basis for communication, guided transmission media, wireless transmission, the publicswitched telephone networks, mobile telephone system.

UNIT-II

Computer Science

THE DATA LINK LAYER: Design issues, error detection and correction, elementary data link protocols, sliding window protocols, example data link protocols - HDLC, the data link layer on theinternet.

THE MEDIUM ACCESS SUBLAYER: Channel allocations problem, multiple accessprotocols, Ethernet, Data Link Layer switching, Wireless LAN, Broadband Wireless, Bluetooth.

UNIT-III

THE NETWORK LAYER: Network layer design issues, routing algorithms, Congestion controlalgorithms, Internetworking, the network layer in the internet (IPv4 and IPv6), Quality of Service.

UNIT-IV

THE TRANSPORT LAYER: Transport service, elements of transport protocol, Simple TransportProtocol, Internet transport layer protocols: UDP and TCP.

UNIT-V

THE APPLICATION LAYER: Domain name system, electronic mail, World Wide Web: architecturaloverview, dynamic web document and http.

APPLICATION LAYER PROTOCOLS: Simple NetworkManagement Protocol, File Transfer Protocol, Simple Mail Transfer Protocol, Telnet.

Text Book(s)

 S. Tanenbaum (2003), Computer Networks, 4th edition, Pearson Education/ PHI, New Delhi, India

Reference Books

- 2. Behrouz A. Forouzan (2006), Data communication and Networking, 4th Edition, Mc Graw-Hill, India.
- 3. Kurose, Ross (2010), Computer Networking: A top down approach, Pearson Education, India.

Computer Science

SUGGESTED CO-CURRICULAR ACTIVITIES& EVALUATION METHODS:

Unit 1: Activity: Hands-on exercises to configure network applications

Evaluation Method:Practical skills in configuring network applications, hardware, and software.

Unit 2: Activity: Protocol Design and Simulation using simulation tools like NS-3 or Cisco Packet

Tracer.

Evaluation Method:Students' ability to design and simulate data link layer protocols and

multiple access protocols

Unit 3: Activity: Guest Lectures and Workshops on routing algorithms, congestion control, and network layer protocols.

Evaluation Method:Students' participation and understanding demonstrated in guest lectures and workshop

Unit 4: Activity: Network Monitoring and Traffic Analysis using tools like Wireshark
Evaluation Method: Understanding of transport protocols through their analysis of network traffic and identification of UDP and TCP behavior

Unit 5: Activity: Group Projects on Network Application Development
Evaluation Method: Group Project Presentations

Course403P:Data Communication and Computer Networks Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

- 1. Understanding various network tools in Windows and Linux
- 2. Study different types of Network devices and Cables
- 3. Building a Local Area Network
- 4. Concept of Network IP Address
- 5. Introduction to Network Simulator Packet Tracer (PT)
- 6. Configuration of a Router using Packet Tracer

Computer Science

- 7. Implementation of a Network using Packet Tracer
- 8. Implementation of Static Routing using Packet Tracer
- 9. Implementation of RIP using Packet Tracer
- 10. Implementation of OSPF using Packet Tracer
- 11. Implement DNS using packet tracer
- 12. Implementation of a VLAN using Packet Tracer

SEMESTER-V

Course 501A: Web Interface Designing Technologies

(Hours/Week: 03 Total Hours: 45 Credits:03)

Learning Objectives:

To enable students to understand web architecture, develop aesthetic websites, create static and dynamic web pages, implement user interactivity, and gain proficiency in installing and utilizing WordPress and plugins

Learning Outcomes: On successful completion of the course, students will be able to

- 1. Understand and appreciate the web architecture and services along with its basic building blocks
- 2. Gain knowledge about various components of a website related to aesthetics
- 3. Demonstrate skills regarding creation of a static website and addition of dynamic behavior to a website
- 4. Get experience on making user-interactive web pages.
- 5. Learn how to install word press and gain the knowledge of installing various plugins to use in their websites.

UNIT - I

HTML: Introduction to web designing, difference between web applications and desktop applications, introduction to HTML, HTML structure, elements, attributes, headings, paragraphs,

Computer Science

images, tables, lists, blocks, symbols, embedding multi-media components in HTML, HTML forms

UNIT - II

CSS: CSS home, introduction, syntax, CSS combinators, colors, background, borders, margins, padding, height/width, text, fonts, tables, lists, position, overflow, float, pseudo class, pseudo elements, opacity, tool tips, image gallery, CSS forms, CSS counters.

UNIT - III

Java Script: What is DHTML, JavaScript, basics, variables, operators, statements, string manipulations, mathematical functions, arrays, functions. objects, regular expressions, exception handling.

UNIT-IV

Client-Side Scripting: Accessing HTML form elements using Java Script object model, basic data validations, data format validations, generating responsive messages, opening windows using java script, different kinds of dialog boxes, accessing status bar using java script, embedding basic animative features using different keyboard and mouse events.

UNIT - V

Word press: Introduction to word press, features, and advantages, installing and configuring word press and understanding its admin panel (demonstration only), working with posts, managing pages, working with media - Adding, editing, deleting media elements, working with widgets, using menus, working with themes, defining users, roles and profiles, adding external links, extending word press with plug-ins.

Text Book(s)

1. Chris Bates, Web Programming Building Internet Applications, Second Edition, Wiley (2007)

Computer Science

2. Paul S.WangSanda S. Katila, an Introduction to Web Design plus Programming, Thomson (2007).

Reference Books

- 1. Head First HTML and CSS, Elisabeth Robson, Eric Freeman, O'Reilly Media Inc.
- 2. An Introduction to HTML and JavaScript: for Scientists and Engineers, David R. Brooks. Springer, 2007
- 3. Schaum's Easy Outline HTML, David Mercer, Mcgraw Hill Professional.
- 4. Word press for Beginners, Dr.Andy Williams.
- 5. Professional word press, Brad Williams, David damstra, Hanstern.

SUGGESTED CO-CURRICULAR ACTIVITIES& EVALUATION METHODS:

Unit 1: Activity: Infographic explaining the necessity to have a web site for each of the agencies such as hotels, hospitals, supermarkets, and educational institutions.

Evaluation Method: Assess the accuracy, visual design, clarity, creativity, use of visual elements, presentation of the infographic explaining the necessity of a website for different agencies.

Unit 2: Activity: Seminar though PPT on various Look and Feelcomponents that websites related

to different agencies

Evaluation Method:Content knowledge, organization, clarity, presentation skills, visual aids, audience engagement

Unit 3: Activity: Code snippets Challenge.

Evaluation Method:Accuracy, functionality, efficiency, code readability, and problem-solving approach of the JavaScript code snippets

Unit 4: Activity: Group discussion ondifferent kinds of web forms that take and validate user input using java script validations

Evaluation Method: Active participation, knowledge sharing, critical thinking, and demonstration of different web forms and JavaScript validations

Unit 5: Activity: Creation of Personal website using wordpress

Evaluation Method: Design aesthetics, functionality, user interactivity, content

Computer Science

organization, and utilization of plugins.

Course 501A-P: Web Interface Designing Technologies Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

- 1. Create an HTML document with the following formattingoptions:
 - (a) Bold, (b) Italics, (c) Underline, (d) Headings (Using H1 to H6 heading styles),
 - (e) Font (Type, Size and Color), (f) Background (Colored background/Image in background), (g) Paragraph, (h) Line Break, (i) Horizontal Rule, (j) Pretag
- 2. Create an HTML document which consistsof:
 - (a) Ordered List (b) Unordered List (c) Nested List (d)Image
- 3. Create a Table with four rows and five columns. Place an image in onecolumn.
- 4. Using "table" tag, align the images as follows:

- 5. Create a menu form using html.
- 6. Style the menu buttons using CSS.
- 7. Create a form using HTML which has the following types of controls:
 - (a) Text Box (b) Option/radio buttons (c) Check boxes (d) Reset and Submitbuttons
- 8. Embed a calendar object in your web page.
- 9. Create a form that accepts the information from the subscriber of a mailing system.

Word press:

10. Installation and configuration of word press

Computer Science

- 11. Access admin panel and manage posts
- 12. Access admin panel and manage pages
- 13. Add widgets and menus
- 14. Create users and assign roles
- 15. Create a site and add a theme to it

SEMESTER-V

Course502A:Web Applications Development using PHP & MYSQL

(Hours/Week: 03 Total Hours: 45 Credits:03)

Learning Objectives:

To enable students to understand open-source tools to create dynamic web pages, implement user interactivity, and gain proficiency in developing web sites

Learning Outcomes: On successful completion of the course, students will be able to

- 1. Write simple programs in PHP.
- 2. Understand how to use regular expressions, handle exceptions, and validate data using PHP.
- 3. Apply In-Built functions and Create User defined functions in PHP programming.
- 4. Write PHP scripts to handle HTML forms.
- 5. Know how to use PHP with a MySQL database and can write database driven web pages.

UNIT-I

The building blocks of PHP: Variables, Data Types, Operators and Expressions, Constants.

Flow Control Functions in PHP: Switching Flow, Loops, Code Blocks and Browser Output.

Working with Functions: Creating functions, Calling functions, Returning the values from User-Defined Functions, Variable Scope, Saving state between Function calls with the static

Computer Science

statement, arguments of functions

UNIT-II

Working with Arrays: Creating Arrays, Some Array-Related Functions.

Working with Objects: Creating Objects, Accessing Object Instances, Working with Strings, Dates and Time: Formatting strings with PHP, Manipulating Strings with PHP, Using Date and

Time Functions in PHP.

UNIT-III

Working with Forms: Creating Forms, Accessing Form Input with User defined Arrays, Combining HTML and PHP code on a single Page, Using Hidden Fields to save state, Redirecting the user, Sending Mail on Form Submission, and **Working with File Uploads**, Managing files on server, **Exception handling.**

UNIT-IV

Working with Cookies and User Sessions: Introducing Cookies, setting a Cookie with PHP, Session Function Overview, starting a Session, working with session variables, passing session IDs in the Query String, Destroying Sessions and Unsetting Variables, Using Sessions in an Environment with RegisteredUsers.

UNIT-V

Interacting with MySQL using PHP: MySQL Versus MySQLi Functions, connecting to MySQL with PHP, Working with MySQL Data. Planning and Creating Database Tables, Creating Menu, Creating Record Addition Mechanism, Viewing Records, Creating the Record Deletion Mechanism.

Text Book(s)

- 1. Julie C. Meloni, SAMS Teach yourself PHP MySQL and Apache, Pearson Education (2007).
- 2. Steven Holzner, PHP: The Complete Reference, McGraw-Hill

Reference Books

1. Robin Nixon, Learning PHP, MySQL, JavaScript, CSS & HTML5, Third Edition O'reilly, 2014

Computer Science

2. Xue Bai Michael Ekedahl, The web warrior guide to Web Programming, Thomson (2006).

SUGGESTED CO-CURRICULAR ACTIVITIES& EVALUATION METHODS:

Unit 1: Activity: Infographic explanation of client-server architecture and different server-side scripting languages.

Evaluation Method: Assess the accuracy, visual design, clarity, creativity, use of visual elements, presentation of the infographic explaining the benefits of server-side scripting languages.

Unit 2: Activity: Presentation on various open-source frameworks available in LAMP model
Evaluation Method: Content knowledge, organization, clarity, presentation skills, visual aids, audience engagement

Unit 3: Activity: Code snippets Challenge.

Evaluation Method:Accuracy, functionality, efficiency, code readability, and problem-solving approach of the PHP code snippets

Unit 4: Activity: Group discussion on Session Management in PHP

Evaluation Method: Active participation, knowledge sharing, critical thinking, and demonstration of Session Management

Unit 5: Activity: Hands-on Lab Session on MYSQL Queries

Evaluation Method:Lab Performance and Correctness of solution Implementation

Course502A-P:Web Applications Development using PHP & MYSQLLab

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

- 1. Write a PHP program to Display "Hello"
- 2. Write a PHP Program to display the today's date.
- 3. Write a PHP program to display Fibonacci series.
- 4. Write a PHP Program to read the employee details.
- 5. Write a PHP program to prepare the student marks list.
- 6. Create student registration form using text box, check box, radio button, select, submit button.

Computer Science

And display user inserted value in new PHP page.

- 7. Create Website Registration Form using text box, check box, radio button, select, submit button. And display user inserted value in new PHP page.
- 8. Write PHP script to demonstrate passing variables with cookies.
- 9. Write a PHP script to connect MySQL server from your website.
- 10. Write a program to keep track of how many times a visitor has loaded the page.
- 11. Write a PHP application to perform CRUD (Create, Read, Update and Delete) operations on a database table.
- 12. Create a web site using any open-source framework built on PHP and MySQL It is a team activity wherein students are divided into multiple groups and each group comes up with their own website with basic features.

SEMESTER-V

Course 501B: Internet of Things

(Hours/Week: 03 Total Hours: 45 Credits:03)

Learning Objectives:

To enable students to understand basic IoT constructs, create IoT solutions to real world problems using IoT

Learning Outcomes: On successful completion of the course, students will be able to

- 1. Understand various concepts, terminologies and applications of IoT
- 2. Learn how to build IoT devices with development boards
- 3. Understand various Wireless protocols for IoT
- 4. Learn how to use various sensors and actuators& develop IoT solutions using Arduino
- 5. Develop and Connect IoT with Cloud Platforms.

UNIT - I

Fundamentals of IoT: Introduction, Definitions & Characteristics of IoT, IoT Architectures, Physical & Logical Design of IoT, Enabling Technologies in IoT, History of IoT, About Things in IoT, The Identifiers in IoT, About the Internet in IoT, IoT frameworks, IoT and M2M.

Computer Science

Applications of IoT: Home Automation, Smart Cities, Energy, Retail Management, Logistics, Agriculture, Health and Lifestyle, Industrial IoT, Legal challenges, IoT design Ethics, IoT in Environmental Protection.

UNIT - II

Sensors Networks: Definition, Types of Sensors, Types of Actuators, Examples and Working, IoT Development Boards: Arduino IDE and Board Types, RaspberriPi Development Kit, RFID Principles and components, Wireless Sensor Networks: History and Context, The node, Connecting nodes, Networking Nodes, WSN and IoT.

Unit - III

Wireless Technologies for IoT: WPAN Technologies for IoT: IEEE 802.15.4, Zigbee, HART, NFC, Z-Wave, BLE, Bacnet and Modbus.

IP Based Protocols for IoT: IPv6, 6LowPAN, LoRA, RPL, REST, AMPQ, CoAP, MQTT. Edge connectivity and protocols.

Unit - IV

Arduino Simulation Environment: Arduino Uno Architecture, Setting up the IDE, Writing Arduino Software, Arduino Libraries, Basics of Embedded C programming for Arduino, Interfacing LED, push button and buzzer with Arduino, Interfacing Arduino with LCD.

Sensor & Actuators with Arduino: Overview of Sensors working, Analog and Digital Sensors, Interfacing of Temperature, Humidity, Motion, Light and Gas Sensors with Arduino, Interfacing of Actuators with Arduino, Interfacing of Relay Switch and Servo Motor with Arduino.

Unit - V

Developing IOT's: Implementation of IoT with Arduino, Connecting and using various IoT Cloud Based Platforms such as Blynk, Thingspeak, AWS IoT, Google Cloud IoT Core etc. Cloud Computing, Fog Computing, Privacy and Security Issues in IoT.

Text Book(s)

Computer Science

- 1. Internet of Things A Hands-on Approach, ArshdeepBahga and Vijay Madisetti, Universities Press, 2015, ISBN: 9788173719547
- 2. Sudip Mishra, Anandarup Mukherjee, Arijit Roy: Introduction to IOT, CambridgeUniversity Press.
- 3. Internet of Things- Dr Surya Durbha & Dr Jyoti Joglekar, Oxford University Press

Reference Books

- 1. Daniel Minoli, "Building the Internet of Things with IPv6 and MIPv6: The Evolving World of M2M Communications", ISBN: 978-1-118-47347-4, Willy Publications
- 2. Pethuru Raj and Anupama C. Raman, "The Internet of Things: Enabling Technologies, Platforms, and Use Cases", CRC Press

SUGGESTED CO-CURRICULAR ACTIVITIES& EVALUATION METHODS:

Unit 1: Activity: Seminar on various applications of IoT through PPT

Evaluation Method:Content knowledge, organization, clarity, presentation skills, visual aids, audience engagement

Unit 2: Activity: Hands-on Lab activity on Arduino Development

Evaluation Method:Lab Performance and Correctness of Circuit Implementation

Unit 3: Activity: Group discussion on Future Wireless Technologies.

Evaluation Method: Active participation, knowledge sharing, critical thinking, and demonstration of different wireless technologies for IoT

Unit 4: Activity: Peer activity on different types of Sensors

Evaluation Method:Peer evaluation of working principle of Sensor, use-cases of sensors.

Unit 5: Activity: Guest Lecture or Expert talk on Cloud based IoT platforms

Evaluation Method: Active Participation, Post Talk report presentation

Course 501B-P: Internet of Things Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

Computer Science

- 1. Understanding Arduino UNO Board and Components
- 2. Installing and work with Arduino IDE
- 3. Blinking LED sketch with Arduino
- 4. Simulation of 4-Way Traffic Light with Arduino
- 5. Using Pulse Width Modulation
- 6. LED Fade Sketch and Button Sketch
- 7. Analog Input Sketch (Bar Graph with LEDs and Potentiometre)
- 8. Digital Read Serial Sketch (Working with DHT/IR/Gas or Any other Sensor)
- 9. Working with Adafruit Libraries in Arduino
- 10. Spinning a DC Motor and Motor Speed Control Sketch
- 11. Working with Shields
- 12. Design APP using Blink App or Things peak API and connect it LED bulb.
- 13. Design APP Using Blynk App and Connect to Temperature, magnetic Sensors.

SEMESTER-V

Course502B:IoT Applications Development and Programming

(Hours/Week: 03 Total Hours: 45 Credits:03)

Learning Objectives:

To enable students to develop IoT solutions for real-world problems

Learning Outcomes: On successful completion of the course, students will be able to

- 1. Understand the Basic Concepts of Internet of Things
- 2. Learn various Sensors and their associative protocols
- 3. Learn the Single Board Computers for development of IoT
- 4. Build the IoT devices with the Node-RED without Complex coding
- 5. Develop various IoT real-time applications

UNIT-I

Overview of the Internet of Things (IoT) and Sensors: Sensors - Energy-based, SignalOutput, Mode of Operation, Electronic Sensors. Connectivity - Bluetooth, Zigbee, Wi-Fi,LoRa, Wired

Computer Science

Communication. Machine Intelligence, Active Management, Sensor Fusion, Smart Devices-Human-Computer Interaction, Context Awareness, Actuators, IoT and SmartCityApplications-AutomobileSensors, SmartHomeSensors, SmartTransportation Sensors.

UNIT-II

IoT Sensors and Their Interfacing Protocols: Vision and Imaging Sensors- Line ScanCameras,3DDepthCameras,SensorsThatMeasureTemperature-Thermocouples,Resistance Temperature Detector (RTD), Temperature Thermistor Sensors, SemiconductorTemperatureSensors,RadiationSensors;ProximitySensors,PressureSensors,Positio nSensors, Photoelectric Sensors, Particle Sensors, Types of Particle Sensors-Metal Detectors,Level Sensors, Leak Detectors, Humidity Sensors, Gas and Chemical Sensors, Gas Detectors,CarbonMonoxide(MQ7)Detectors,FlameDetectors, SensorCommunicationProtocols

UNIT-III

ProgrammingSingleBoardComputers: ArduinoProgramming,RaspberryPi-Basicfunctionality of Raspberry Pi B+ board, setting up the board, configuration and use, Basics ofLinux and its use, Introduction to Raspberry Pi GPIO Access, Interfacing DHT, Interfacing Picam to Raspberry Pi zero w, Pi Camera Specifications, Pi Camera Access, Interfacing PIRSensor **Python:**FileConcepts,SpreadsheetConcepts,CommunicationConcepts,WiredandWirelessProgrammingConcepts

UNIT-IV

Node-RED: Node-RED Features, Installation of Node-RED, Node-RED Architecture, Node-RED Flow Editor, Basic Function Nodes, Node-RED Library, Node-RED Applications; MQTT Protocols, Google Sheets Programming (gspread), Firebase Programming, Matplotlib- Getting Started, Bar Graphs, Scatter Plot, Spectrum Representation, Coherence of Two Signals, Cross-Correlation Graph, Autocorreleation Graph, Changing Figure Size in Different Units, Scale Pie Charts, Style Sheets- FiveThirtyEight Style Sheet, Solarized Light Style Sheet.

UNIT-V

Computer Science

WirelessConnectivityinIoT:Introduction,Low-PowerWide-AreaNetworks(LPWANs),RFID

Protocol, XBEE Radios with Arduino, Bluetooth with Arduino, Arduino with a
GSMModem,Arduino with Firebase Cloud Connectivity

TheInternetofThingsthroughtheRaspberry Pi:Introduction,ClusterComputingwithRaspberry Pi Zero W-Message Passing Interface (MPI), Networking with RP is for SimpleMPIScripts,Simple MPIProgramming

Text Book(s)

- InternetofThingsUsingSingleBoardComputers, G.R. Kanagachidambaresan, Apress, 202
 2.
- 2. **PracticalNode-REDProgramming**, *TaijiHagino*, PacktPublishing, 2021

Reference Books

- 1. InternetofThingsProgrammingProjects:BuildmodernIoTsolutionswiththeRaspberry Pi 3 and Python, ColinDow, Packt Publishing, 2021
- 2. **ProgrammingtheInternetofThings:AnIntroductiontoBuildingIntegrated,Device-to- CloudIoT Solutions,** *AndyKing*, O'Reilly Media,2021

SUGGESTED CO-CURRICULAR ACTIVITIES& EVALUATION METHODS:

Unit 1: Activity: Case Study Presentation on Smart City IoT realization
Evaluation Method: Content knowledge, organization, clarity, presentation skills, visual aids, audience engagement

Unit 2: Activity: Poster Presentation for various kinds of Sensors

Evaluation Method: Creative & informative posters or infographics on Sensors

Unit 3: Activity: Hands-on Lab using RPi.

Evaluation Method:Lab Performance and Correctness of solution Implementation

Unit 4: Activity: Hands-on Lab Activity on Node-RED

Evaluation Method:Lab Performance and Correctness of solution Implementation.

Unit 5: Activity: Guest Lecture or Expert talk on Cloud based IoT platforms

Computer Science

Evaluation Method: Active Participation, Post Talk report presentation

Course 502B-P: IoT Applications Development and Programming Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

- 1. Write a program to switch light on when the input is 1 and switch the light off when the input is 0 using Raspberry pi
- 2. Install Node-RED and Flow-based Programming Development Environment
- 3. Create Basic Flows with Major Nodes
- 4. Develop a Node-Red Flow for various Case Studies
- 5. Implement Node-RED in the Cloud Calling a Web API from Node-RED
- 6. Create a To Do Application with Node-RED Handling Sensor Data on the Raspberry Pi
- 7. Develop a Dashboard with various 2D Graphs with Matplotlib
- 8. Install MySQL database in Raspberry pi.
- 9. Write a program to work with basic MySQL queries by fetching data from database in Raspberry pi.
- 10. Arduino with Firebase Cloud Connectivity
- 11. Visualize Data by Creating a Server-side Application in the Firebase

Computer Science

SEMESTER-V

Course 501C: Foundations of Data Science

(Hours/Week: 03 Total Hours: 45 Credits:03)

Learning Objectives:

To enable students to develop IoT solutions for real-world problems

Learning Outcomes: On successful completion of the course, students will be able to

- 1. Identify the need for data science and understand various data collection strategies
- 2. Understand about NoSQL and Descriptive Statistics
- 3. Apply Numpy methods to process the data in an array.
- 4. Summarize and Compute Descriptive Statistics using Pandas.
- 5. Apply powerful data manipulations visualization using Pandas

UNIT-I

Computer Science

Introduction to Data Science: Need for Data Science – What is Data Science - Evolution of Data Science, Data Science Process – Business Intelligence and Data Science – Prerequisites for a Data Scientist – Tools and Skills required. Applications of Data Science in various fields – Data Security Issues.

Data Collection Strategies, Data Pre-Processing Overview, Data Cleaning, DataIntegration and Transformation, Data Reduction, DataDiscretization, Data Munging, Filtering

UNIT-II

Descriptive Statistics – Mean, Standard Deviation, Skewnessand Kurtosis; Box Plots – Pivot Table – Heat Map – Correlation Statistics – ANOVA.

No-SQL: Document Databases, Wide-column Databases and Graphical Databases.

UNIT-III

Python for Data Science –Python Libraries, Python integrated Development Environments (IDE) for Data Science, **NumPy Basics:** Arrays and Vectorized Computation- The NumPy ndarray- Creating ndarrays- DataTypes for ndarrays- Arithmetic with NumPy Arrays- Basic Indexing and Slicing - Boolean Indexing-Transposing Arrays and Swapping Axes.

Universal Functions: Fast Element-Wise Array Functions- Mathematical and Statistical Methods-Sorting- Unique and Other Set Logic.

UNIT-IV

Introduction to pandas Data Structures: Series, Data Frame and Essential Functionality: Dropping Entries- Indexing, Selection, and Filtering- Function Application and Mapping-Sorting and Ranking.

Summarizing and Computing Descriptive Statistics- Unique Values, Value Counts, and Membership. Reading and Writing Data in Text Format.

UNIT-V

Data Cleaning and Preparation: Handling Missing Data - Data Transformation: Removing Duplicates, Transforming Data Using a Function or Mapping, Replacing Values, Detecting and Filtering Outliers-

Computer Science

Plotting with pandas: Line Plots, Bar Plots, Histograms and Density Plots, Scatter or Point Plots.

Text Book(s)

- 1. Y. Daniel Liang, "Introduction to Programming using Python", Pearson, 2012.
- 2. Wes McKinney, "Python for Data Analysis: Data Wrangling with Pandas, NumPy, and IPython", O'Reilly, 2nd Edition, 2018.

Reference Books

- Sanjeev Wagh, Manisha Bhende, Anuradha Thakare, 'Fundamentals of Data Science, CRC Press, 1st Edition, 2022
- 2. Jake VanderPlas, "Python Data Science Handbook: Essential Tools for Working with Data", O'Reilly, 2017.

SUGGESTED CO-CURRICULAR ACTIVITIES& EVALUATION METHODS:

Unit 1: Activity: Seminar on Role of Data Science in Politics

Evaluation Method:Content knowledge, organization, clarity, presentation skills, visual aids, audience engagement

Unit 2: Activity: Exercises on Descriptive Statistics

Evaluation Method: Problem Solving, Accuracy

Unit 3: Activity: Hands-on Lab using Numpy

Evaluation Method:Lab Performance and Correctness of solution Implementation

Unit 4: Activity: Hands-on Lab Activity on Pandas

Evaluation Method:Lab Performance and Correctness of solution Implementation.

Unit 5: Activity: Group Activity to visualize college performance records using various plotsEvaluation Method: Active Participation, Post Talk report presentation

Course 501C-P: Foundations of Data Science Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

Computer Science

List of Experiments:

- 1. Study on various python IDEs for Data Science
- 2. Create NumPy arrays from Python Data Structures, Intrinsic NumPy objects andRandom Functions.
- 3. Manipulation of NumPy arrays- Indexing, Slicing, Reshaping, Joining and Splitting.
- 4. Computation on NumPy arrays using Universal Functions and Mathematicalmethods.
- 5. Create Pandas Series and Data Frame from various inputs.
- 6. Import any CSV file to Pandas Data Frame and perform the following:
 - a. Visualize the first and last 10 records
 - b. Get the shape, index and column details
 - c. Select/Delete the records (rows)/columns based on conditions.
 - d. Perform ranking and sorting operations.
 - e. Do required statistical operations on the given column
- 7. Import any CSV file to Pandas Data Frame and perform the following:
 - a. Handle missing data by detecting and dropping/filling missing values.
 - b. Transform data using apply () and map() method.
 - c. Detect and filter outliers.
 - d. Perform Vectorized String operations on Pandas Series.
 - e. Visualize data using Line Plots, Bar Plots, Histograms, Density Plotsand Scatter Plots.

Computer Science

SEMESTER-V

Course502C:Application Development using Python

(Hours/Week: 03 Total Hours: 45 Credits:03)

Learning Objectives:

To enable students to develop IoT solutions for real-world problems

Learning Outcomes: On successful completion of the course, students will be able to

- 1. Examine Python syntax and semantics and be fluent in the use of Python flow control and functions.
- 2. Demonstrate proficiency in handling Strings and File Systems.
- Create, run and manipulate Python Programs using core data structures like Lists, Dictionaries and use Regular Expressions.
- 4. Interpret the concepts of Web Programming and GUI in Python

Computer Science

5. Apply concepts of Python programming in various fields related to IOT, Web Services and Databases in Python.

UNIT-I

Python basics, Objects- Python Objects, Standard Types, Other Built-in Types, InternalTypes,StandardTypeOperators,StandardTypeBuilt-inFunctions,CategorizingtheStandardTypes, Unsupported Types

Numbers-

IntroductiontoNumbers,Integers,FloatingPointRealNumbers,ComplexNumbers,Operators,Built-in Functions, RelatedModules

Sequences-Strings, Lists, and Tuples, Dictionaries and Set Types

Control Flow, Truthiness, Sorting, List Comprehensions, Generators and Iterators

UNIT-II

Files: File Objects, File Built-in Function [open()], File Built-in Methods, File Built-inAttributes, Standard Files, Command-line Arguments, File System, File Execution Exceptions: ExceptionsinPython, Detecting and Handling Exceptions, Context Management, Exceptions as Strings, Raising Exceptions, Assertions, Standard Exceptions, Creating Exceptions, Why Exceptions (Now)?, Why Exceptions at All?, Exceptions and the sys Module, Related Modules

Modules: Modules

and Files, Namespaces, Importing Modules, Importing Module Attributes, Module Built-in Functions, Packages, Other Features of Modules

UNIT-III

Regular Expressions: Introduction, Special Symbols and Characters, Resand Python **Multithreaded Programming:** Introduction, Threads and Processes, Python, Threads, and the Global Interpreter Lock, Thread Module, Threading Module, Related Modules

UNIT-IV

Computer Science

GUI Programming: Introduction, Tkinter and Python Programming, Brief Tour of OtherGUIs,Related Modulesand Other GUIs

Web Programming: Introduction, Wed Surfing with Python, Creating Simple Web Clients, Advanced Web Clients, CGI-

HelpingServersProcessClientData,BuildingCGIApplication,Advanced CGI, Web (HTTP) Servers

UNIT-V

DatabaseProgramming:Introduction,PythonDatabaseApplicationProgrammer'sInterface (DBAPI), ObjectRelational Managers(ORMs), Related Modules

Text Book(s)

- 1. Core Python Programming, Wesley J. Chun, Second Edition, Pearson.
- 2. Think Python, Allen Downey, Green Tea Press.

Reference Books

- 1. Introduction to Python, Kenneth A. Lambert, Cengage.
- 2. Python Programming: A Modern Approach, Vamsi Kurama, Pearson.
- 3. Learning Python, Mark Lutz, O' Really.

SUGGESTED CO-CURRICULAR ACTIVITIES& EVALUATION METHODS:

Unit 1: Activity: Hands-on Lab exercise on Python Control Statements

Evaluation Method:Lab Performance and Correctness of solution Implementation

Unit 2: Activity: Assignment of Files in Python

Evaluation Method: Problem Solving, Accuracy

Unit 3: Activity: Exercises on Regular expressions

Evaluation Method: Solutions, Accuracy of Validation

Unit 4: Activity: Poster Presentation on various GUI components in Python

Evaluation Method:Content knowledge, organization, clarity, presentation skills, visual aids.

Computer Science

Unit 5: Activity: GroupProject

Evaluation Method: Project effectiveness, User interface, Solution to the Problem

Course 502C-P: Application Development using Python Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

- 1. Write a menu driven program to convert the given temperature from Fahrenheit to Celsius and vice versa depending upon user's choice.
- 2. Write a python program to calculate total marks, percentage and grade of a student. Marks obtained in each of the three subjects are to be input by the user. Assign grades according to the following criteria:

GradeA:Percentage>=80

Grade B: Percentage>=70 and 80 Grade C: Percentage>=60 and <70 Grade D: Percentage>=40 and <60

GradeE: Percentage<40

- 3. Demonstrate various methods of Sequence Data Types
- 4. Write a python program to display the first n terms of Fibonacci series.
- 5. Write a python program to calculate the sum and product of two compatible matrices.
- 6. Write a function that takes a character and returns True if it is a vowel and False otherwise.
- 7. Write a program to implement exception handling.
- 8. Write a program to implement Multithreading
- 9. Develop a Python GUI calculator using Tkinter
- 10. Write a Python program to read last 5 lines of a file.
- 11. Design a simple database application that stores the records and retrieve the same
- 12. Design a database application to search the specified record from the database.
- 13. Design a database application to that allows the user to add, delete and modify the records.

Computer Science

SEMESTER-VII

Course701:Advanced Data Structures

(Hours/Week: 03 Total Hours: 45 Credits:03)

Learning Objective:

To familiarize with the organization of data so as to optimize the searching time

Learning Outcomes: Upon completion of the course, students will be able to:

- 1. Apply appropriate hashing techniques for a given problem.
- 2. Simulate the operations of Heap trees.

Computer Science

- 3. Provide solutions using multi-way search trees.
- 4. Choose appropriate algorithm while establishing a network.
- 5. Apply the knowledge of disjoint sets for solving a given problem.

UNIT-I

Hashing – General Idea, Hash Function, Separate Chaining, Hash Tables without linked lists: Linear Probing, Quadratic Probing, Double Hashing, Rehashing, Hash Tables in the Standard Library, Universal Hashing, Extendible Hashing.

UNIT-II

Priority Queues (Heaps) – Model, Simple implementations, Binary Heap: Structure Property, Heap Order Property, Basic Heap Operations: insert, delete, Percolate down, other Heap Operations.

Binomial Queues: Binomial Queue Structure, Binomial Queue Operations, Implementation of Binomial Queue, Priority Queues in the Standard Library.

UNIT-III

Trees – **AVL**: Single Rotation, Double Rotation, B-Trees, B⁺ Trees

Multi-way Search Trees – **2-3 Trees**: Searching for an element in a 2-3 Tree, inserting a new element in a 2-3 Tree, deleting an element from a 2-3 Tree.

Red-Black Trees – Properties of red-black trees, rotations, insertion, deletion.

UNIT-IV

Graph Algorithms – Elementary Graph Algorithms: Topological sort, Single Source Shortest Path Algorithms: Dijkstra's, Bellman-Ford, All-Pairs Shortest Paths: Floyd-Warshall's Algorithm.

UNIT-V

Disjoint Sets – Equivalence relation, Basic Data Structure, Simple Union and Find algorithms, Smart Union and Path compression algorithm.

Computer Science

Text Books:

- 1. Fundamentals of Computer Algorithms, Ellis Horowitz, SatrajSahani and Rajasekharam, 2nd Edition, 2009, University Press Pvt. Ltd.
- 2. Advanced Data Structures, Reema Thareja, S. Rama Sree, Oxford University Press, 2018.

Reference Books:

- 1. Data Structures and Algorithm Analysis in C++, Mark Allen Weiss, 4 th Edition, 2014, Pearson.
- 2. Introduction to Algorithms, Thomas H Cormen, Charles E. Leiserson, Ronald L. Rivest, Clifford Stein, 3 rd Edition, 2009, The MIT Press.

SUGGESTED CO-CURRICULAR ACTIVITIES& EVALUATION METHODS:

Unit 1: Activity: Quiz on hashing techniques, covering concepts, algorithms, and applications.
Evaluation Method: Assess students' understanding of hashing techniques through quiz scores and performance.

Unit 2: Activity: Seminar on Heap Trees

Evaluation Method:Evaluate the clarity, depth of understanding, and presentation skills demonstrated in the seminar.

Unit 3: Activity: Group Project to design and implement a multi-way search tree data structure, along with algorithms for insertion, deletion, and searching.

Evaluation Method:Functionality, correctness, and efficiency of the multi-way search tree implementation.

Unit 4: Activity: Role Play to simulate the process of establishing a network, making algorithmic

decisions along the way.

Evaluation Method:Students' understanding and application of network establishment algorithms through their decision-making process during the role play.

Unit 5: Activity: Puzzle Challenge that can be solved using disjoint sets, and encourage them to

Computer Science

apply their knowledge to find a solution.

Evaluation Method: Assess the correctness and efficiency of students' solutions to the puzzle or problem involving disjoint sets.

Course 701-P: Advanced Data Structures Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

- 1. Implement Linear probing Hashing Technique.
- 2. Implement Quadratic probing Hashing Technique.
- 3. Implement Binary Heap and its operations.
- 4. Implement AVL Trees and its operations.
- 5. Implement the operations on B Trees
- 6. Implement 2-3 Trees and its operations.
- 7. Implement the operations of Red-Black trees
- 8. Implement Dijkstra's shortest path algorithm.
- 9. Implement Bellman-Ford shortest path algorithm.
- 10. Implement Floyd-Warshall's Algorithm.
- 11. Implement disjoint sets and its operations.
- 12. Implement Union and Find algorithms

SEMESTER-VII

Course 702: Artificial Intelligence

(Hours/Week: 03 Total Hours: 45 Credits:03)

Learning Objective:

To provide students with a comprehensive understanding of artificial intelligence (AI) principles and techniques

Learning Outcomes: Students after successful completion of the course will be able to:

Computer Science

- 1. Analyze AI problems and search techniques using underlying assumptions and AI techniques.
- 2. Apply heuristic search techniques for problem-solving and optimization.
- 3. Understand knowledge representation approaches and apply predicate logic for representing facts and relationships.
- 4. Utilize rule-based systems for representing knowledge and apply reasoning techniques for problem-solving.
- 5. Implement symbolic reasoning under uncertainty and augment problem-solving strategies with non-monotonic reasoning.

UNIT-I

Problems and Search: What is Artificial Intelligence, The AI Problems, and UnderlyingAssumption, what is an AIT echnique?

Problems, Problems Spaces, and Search: Defining the problem as a state spaces earch, production system s, problems characteristics, is sues in the design of search programs.

UNIT-II

Heuristic Search Techniques: Generate-and-test, Hill Climbing, Best-First Search, ProblemReduction, Constraint Satisfaction, Means-EndsAnalysis

UNIT-III

KnowledgeRepresentationIssues: Representations and Mapping, Approaches to Knowledge Representation, The frame problem. Using Predicate Logic: Representing simple facts in logic, Representing Isa relationships, predicates, Resolution

UNIT-IV

RepresentingKnowledgeusingRules:ProceduralVsDeclarativeknowledge,LogicProgramming,ForwardVsBackwardReasoning,Matching, ControlKnowledge

UNIT-V

Computer Science

Symbolic Reasoning under Uncertainty: Introduction to Non-monotonic Reasoning, LogicsforNon-

monotonic Reasoning, Implementation is sues, Augmenting a Problem solver, implementation: DFS, BFS.

Statistical Reasoning: Probability and Bayes Theorem, Certainty Factors and Rule-Probability and Bayes Theorem Factors and Rule-Probability and Probability and Pro

BasedSystems, BayesianNetworks, Dempster-ShaferTheory.

Text Books:

1. Russell, S., & Norvig, P. Artificial intelligence: a Moderna pproach. Third Edition. Pearsonnew international edition. 2014.

Reference Books:

2. Artificial Intelligence, Second Edition, Elaine Rich, Kevin Knight, Tata McGraw-Hill Edition.

SUGGESTED CO-CURRICULAR ACTIVITIES& EVALUATION METHODS:

Unit 1: Activity: Group discussion on real-world AI problems and possible search techniques.
Evaluation Method: Active Participation, Presentation and analysis of group discussion outcomes.

Unit 2: Activity: Problem-solving tasks using heuristic search algorithms.

Evaluation Method: Assessment of problem-solving approach and solution quality.

Unit 3: Activity: Hands-on activity to create knowledge representations using predicate logic.

Evaluation Method: Evaluation of knowledge representation accuracy and logical reasoning.

Unit 4: Activity: Scenario-based problem-solving using rule-based systems.

Evaluation Method: Assessment of problem-solving approach and solution effectiveness.

Unit 5: Activity: Simulation activity to implement symbolic reasoning under uncertainty.Evaluation Method: Evaluation of simulation results and reasoning accuracy.

Course 702-P: Artificial Intelligence Lab

Computer Science

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

- 1. Write a Program to Implement Breadth First Search
- 2. Write a Program to Implement Depth First Search
- 3. Write a Program to Implement Tic-Tac-Toe game.
- 4. Write a Program to implement 8-Puzzle problem
- 5. Write a Program to Implement Water-Jug problem
- 6. Write a Program to Implement Travelling Salesman problem
- 7. Write a Program to Implement Towers of Hanoi problem
- 8. Write a Program to implement 8-Queens problem

SEMESTER-VII

Course703:Computer Graphics

(Hours/Week: 03 Total Hours: 45 Credits:03)

Learning Objective:

To Develop a comprehensive understanding of computer graphics principles, techniques, and algorithms, and apply them to create visually appealing 2D and 3D graphics.

Computer Science

Learning Outcomes:

Studentsaftersuccessfulcompletionofthecoursewillbeableto:

- 1. Understand computer graphics fundamentals
- 2. Perform 2D and 3D
- 3. Apply window-to-view port transformation and perform line and polygon clipping operations.
- 4. Determine visible surfaces and apply computer graphics algorithms for depth comparison, back-face removal, and rendering.
- 5. Apply animation principles, work with Flash interface, and gain an introduction to virtual reality.

UNIT-I

Introduction: Advantage of Computer Graphics and Areas of Applications, Hardware and Software for Computer Graphics- Hard Copy, Display Technologies, Random Scan Display System, Video Controller, Random Scan Display Processor, Raster Graphics, Scan Conversion Algorithms (Line, Circle, Ellipse), Area Filling (Rectangle, Ellipse), Clipping (Lines, Circle, Ellipse), Clipping Polygons

UNIT-II

Two dimensional and three-dimensional transformations: 2-Dimensional transformation, 2-D Translation, Rotation, Scaling, Homogeneous Coordinates, Reflection, Shear transform, 3-dimensional transformation, 3-D Translation, Rotation Scaling, Reflection, Shear.

UNIT-III

Clipping: Window to view port transformation, Clipping, line clipping, Cohen —Sutherland line clipping, Polygon clipping, Sutherland and Gary Hodgman polygon clipping algorithm

UNIT-IV

Visible Surface Determination and Computer Graphics algorithm: Image space and object space techniques, Hidden Surface removal—Depth comparisonZ-Buffer Algorithm, Back-Face

Computer Science

Removal, The Painter's Algorithm, Scan-Line Algorithm, Light and Color and different color models (RGB,CMY, YIQ)

UNIT-V

Animation and Virtual Reality: Basic Principles of Animation and Types of Animation, Introduction to the flash interface: Setting stage dimensions, working with panels, panel layouts, Layers & Views, Shaping Objects – Overview of shapes, Drawing & Modifying Shapes, Bitmap Images & Sounds

Animation -Principles, Frame by frame animation, tweening, masks, Introduction to virtual reality.

Text Books

1. Foley, J. D., A. V. Dam, S. K. Feiner, J. F. Hughes, Computer Graphics Principle and Practices, Addison Wesley Longman, Singapore Pvt. Ltd.,

Reference Books

- 1. Hearn Donald, M. P. Baker, Computer Graphics, 2E, Prentice Hall of India Private Limited, New Delhi
- 2. Robert R & Snow D Flash CS4 Professional Bible, Wiley Publishing

SUGGESTED CO-CURRICULAR ACTIVITIES& EVALUATION METHODS:

- Unit 1: Activity: Quiz on computer graphics concepts and terminology.
 - Evaluation Method: Knowledge of computer graphics principles and concepts
- Unit 2: Activity: Hands-on lab sessions on 2D and 3D graphics programming.
 - **Evaluation Method:**Practical assignments evaluating the implementation of 2D and 3D graphics operations
- Unit 3: Activity: Group Project on window-to-view port transformation and clipping algorithms

 Evaluation Method: Project effectiveness, Functionality, Solution to the Problem
- Unit 4: Activity: Seminar on visible surface determination algorithms and rendering techniques

 Evaluation Method: Presentation and demonstration of projects showcasing the

Computer Science

application of rendering algorithms and surface removal

Unit 5: Activity: Workshop on animation principles and Flash interface usage, hands-on experience with virtual reality technologies and tools

Evaluation Method:Individual projects demonstrating the application of animation principles, Flash interface usage, and virtual reality

Course 703-P: Artificial Intelligence Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

- 1. Implement Brenham's line drawing algorithm for all types of slopes
- 2. Implement area filling algorithms
- 3. Create and rotate a line about a fixed point and origin.
- 4. Create and rotate a triangle about the origin and a fixed point.
- 5. Draw a color cube and spin it using OpenGL transformation matrices.
- 6. Clip a line using Cohen-Sutherland algorithm.
- 7. Implement polygon clipping algorithm
- 8. Implement Z-buffer algorithm
- 9. Implement Painter's algorithm.
- 10. Implement tweening

SEMESTER-VII

Course 704: Design and Analysis of Algorithms

(Hours/Week: 03 Total Hours: 45 Credits:03)

Learning Objectives:

ANDHRA PRADESH STATE COUNCIL FOR HIGHER EDUCATION

FOUR YEAR B.SC. (HONS) SYLLABUS UNDER CBCS W.E.F. 2023-2024

Computer Science

To design, develop and analyze algorithms to provide optimal solutions.

Learning Outcomes: Upon successful completion of the course, students will be able to:

1. Understand the fundamental concepts of algorithm analysis and design techniques.

2. Apply divide and conquer design techniques for solving problems

3. Analyze the performance of given problem using greedy approach.

4. Analyze the given problem and provide the feasible solution using dynamic

programming.

5. Analyze the complexity of a given problem.

UNIT-I

Introduction: Notion of Algorithm, Fundamentals of Algorithmic Problem Solving.

Fundamentals of the Analysis of Algorithm Efficiency: Analysis framework and Asymptotic

Notations and Basic Efficiency Classes, Amortized Analysis. Introduction to Brute Force

Technique, Exhaustive Search.

UNIT-II

Divide and Conquer: Introduction, Merge sort, Quick sort, Binary Search, Finding Maximum

and Minimum, Strassen's Matrix Multiplication

UNIT-III

The Greedy Method: Introduction, Huffman Trees and codes, Minimum Coin Change problem,

Knapsack problem, Job sequencing with deadlines, Minimum Cost Spanning Trees, Single

Source Shortest paths.

UNIT-IV

Dynamic Programming: Introduction, 0/1 Knapsack problem, All pairs shortest paths, Optimal

Binary search trees, Travelling salesman problem.

UNIT-V

Back Tracking: Introduction, n-Queens problem, Sum of subsets, Hamiltonian cycle.

Computer Science

Branch and Bound: Introduction, Assignment problem, Travelling Salesman problem. **Introduction to Complexity classes:** P and NP Problems, NPComplete Problems.

Text Books:

1. Fundamentals of computer algorithms, Ellis Horowitz, Sartaj Sahni, S. Rajasekharan, Second Edition, 2008, Universities Press.

Reference Books:

- 1. Introduction to the Design & Analysis of Algorithms, Anany Levitin, Third Edition, 2011, Pearson Education.
- 2. Data Structures and Algorithm Analysis in C, Mark Allen Weiss, 2002, Pearson.

SUGGESTED CO-CURRICULAR ACTIVITIES& EVALUATION METHODS:

Unit 1: Activity: Algorithm Design Contest.

Evaluation Method: Written exam, assessing understanding and application of algorithmic concepts

Unit 2: Activity: Seminar on Divide and Conquer Problem & Solutions.

Evaluation Method:Presentation, Concept Depth, Suitable Applications in real world domain

Unit 3: Activity: Greedy Algorithm Simulation

Evaluation Method:Simulation exercise, evaluating problem analysis and greedy approach

Unit 4: Activity: Algorithm Visualization

Evaluation Method: Visual representation of algorithms, understanding, presentation and communication skills

Unit 5: Activity: Quiz on complexity analysis concepts

Evaluation Method: Understanding the Complexity classes and problem Analysis

Course 704-P: Design and Analysis of Algorithmsusing Java / Python Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

Computer Science

List of Experiments:

- 1. Write a program to implement Merge Sort and analyze its performance.
- 2. Write a program to implement Quick Sort and analyze its performance.
- 3. Write a program to find the minimum and maximum in a list of elements and analyze it's performance.
- 4. Write a program to implement Minimum Cost Spanning Trees and analyze its performance.
- 5. Write a program to implement Single source shortest path algorithm and analyze its performance.
- 6. Write a program to implement All pairs shortest path algorithm and analyze its performance.
- 7. Write a program to implement 0/1 knapscak problem and analyze its performance.
- 8. Write a program to implement n-Queens problem and analyze its performance.
- 9. Write a program to implement sum of subsets problem and analyze its performance.
- 10. Write a program to implement Travelling Sales man problem using Branch and Bound approach and analyze its performance.

SEMESTER-VII

Course705:Principles of Machine Learning

(Hours/Week: 03 Total Hours: 45 Credits:03)

ANDHRA PRADESH STATE COUNCIL FOR HIGHER EDUCATION

FOUR YEAR B.SC. (HONS) SYLLABUS UNDER CBCS W.E.F. 2023-2024

Computer Science

Learning Objectives:

To design, develop and analyze algorithms to provide optimal solutions.

Learning Outcomes: Upon successful completion of the course, students will be able to:

- 1. Understand the features of machine learning to apply on real world problems.
- Characterize the machine learning algorithms as supervised learning and unsupervised learning, apply and analyze the various algorithms of supervised and unsupervised learning.
- 3. Analyze the concept of neural networks for learning linear and non-linear activation functions.
- 4. Identify an appropriate clustering technique to solve real world problems.
- 5. Choose a suitable machine learning model, implement and examine the performance of the chosen model for a given real world problems.

UNIT-I:

Introduction: What is Machine Learning, Examples of Various Learning Paradigms, Perspectives and Issues, Version Spaces, Finite and Infinite Hypothesis Spaces, PAC Learning

UNIT-II

Learning a Class from Examples, Linear, Non-linear, Multi-class and Multi-label classification, Generalization error bounds: VC Dimension, **Decision Trees:** ID3, Classification and Regression Trees, Regression: Linear Regression, Multiple Linear Regression, Logistic Regression.

UNIT-III

Neural Networks:Introduction, Perceptron, Multilayer Perceptron, Support vector machines: Linear and Non-Linear, Kernel Functions, K-Nearest Neighbors.

UNIT-IV

Computer Science

Introduction to clustering, Hierarchical: AGNES, DIANA, Partitional: K-means clustering, K- Mode Clustering, Self-Organizing Map, Expectation Maximization, Gaussian Mixture Models, Principal components analysis (PCA)

UNIT-V

Machine Learning in Practice Design, Analysis and Evaluation of Machine Learning experiments, Feature selection Mechanisms, other issues: Imbalanced data, missing values, Outliers.

Text Books:

 Ethem Alpaydin, Introduction to Machine Learning, MIT Press, Prentice Hall of India, Third Edition 2014

Reference Books:

- 1. Machine learning, Dr. S. Sridhar and M. Vijaya Lakshmi, Oxford University Press, 2021.
- 2. Tom Mitchell, Machine Learning, McGraw Hill, 3rd Edition, 1997.
- 3. Sergios Theodoridis, Konstantinos Koutroumbas, Pattern Recognition, Academic Press, 4th edition, 2008, ISBN:9781597492720
- 4. Charu C. Aggarwal, Data Classification Algorithms and Applications, CRC Press, 2014
- 5. Charu C. Aggarwal, DATA CLUSTERING Algorithms and Applications, CRC Press, 2014

SUGGESTED CO-CURRICULAR ACTIVITIES& EVALUATION METHODS:

Unit 1: Activity: Case Study of real-worldapplications of Machine Learning

Evaluation Method: Presentation, Concept Depth, Suitable Applications in real world domain

Unit 2: Activity: Seminar on Supervised Machine Learning Algorithms

Evaluation Method: Presentation, Concept Depth, Suitable Applications in real world domain

Unit 3: Activity: Neural Network Activation Function Exploration

Evaluation Method: Hands-on activity, evaluating the understanding and analysis of

Computer Science

linear and non-linear activation functions

Unit 4: Activity: Case Study on Clustering

Evaluation Method: Analyzing real-world clustering problems, evaluating the ability to identify and apply appropriate clustering techniques for solving real-

⁄α1⁻

world problems

Unit 5: Activity: Project work on Machine Learning Models

Evaluation Method: Real-world project implementation, evaluating the ability to choose

and implement a suitable machine learning model for solving realworld problems

Course 705-P: Principles of Machine Learning Labusing Python / R

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

- 1. Implement Decision Tree learning.
- 2. Implement Logistic Regression.
- 3. Implement classification using Multilayer perceptron.
- 4. Implement classification using SVM
- 5. Implement K-means Clustering to Find Natural Patterns in Data.
- 6. Implement K-mode Clustering
- 7. Implement Hierarchical clustering.
- 8. Implement Principal Component Analysis for Dimensionality Reduction.
- 9. Implement Multiple Correspondence Analysis for Dimensionality Reduction.
- 10. Implement Gaussian Mixture Model Using the Expectation Maximization
- 11. Implement k-nearest neighbors' algorithm to classify the iris data set. Print both correct and wrong predictions. Java/Python ML library classes can be used for this problem.
- 12. Implement the non-parametric Locally Weighted Regression algorithm in order to fit data points. Select appropriate data set for your experiment and draw graphs.

Computer Science

SEMESTER-VII

Course706:Software Testing

(Hours/Week: 03 Total Hours: 45 Credits:03)

Learning Objectives:

To provide students with a comprehensive understanding of software testing principles, methodologies, and tools, enabling them to effectively design and execute various levels of testing, automate testing processes using Selenium and automation frameworks.

Learning Outcomes: Upon successful completion of the course, students will be able to:

- 1. Understand software testing principles and apply effective test case design strategies.
- 2. Implement and execute different levels of testing
- 3. Utilize Selenium for automation testing, including handling web elements and utilizing advanced features.
- 4. Implement and leverage automation testing frameworks for efficient test automation.
- 5. Apply TestNG framework for advanced test execution, management, and parallel processing.

UNIT-I

Fundamentals: Software Testing Principals – Tester Role in Software Development Manual Testing and Automation Testing

Introduction to testing design strategies: Test case design strategies – Using black box approach to test case design – Random testing – Equivalence class partitioning – Boundary value analysis –Using white box approach to test design – Test adequacy criteria – Coverage and control flow graphs – Covering code logic – Paths – Their role in white box-based test design

UNIT-II

Computer Science

Levels of Testing: The need for levels of testing – Unit test – Unit test planning – Designing the unit tests – The class as a testable unit – The test harness – Running the unit tests and recording results – Integration tests – Designing integration tests – Integration test planning – System test – The different types – Regression testing – Alpha, beta and acceptance tests

UNIT-III

Selenium Basics: Automation Testing, Introduction to Selenium and its Components, Selenium IDE Features, Selenium Download and Installation, Creating Scripts using Firebug and Its Installation, Locator Types

Selenium WebDriver: Selenium WebDriver Installation with Eclipse, Handling Dropdowns, Explicit and Implicit Wait, Handling Alerts/Pop-ups, Handling Web Tables, Frames, Dynamic Elements, Robot API, AutoIT

UNIT-IV

Selenium Framework: Test Automation Framework: Introduction, Benefits of Automation Framework, Types of Automation framework

UNIT-V

Introduction to TestNG: TestNG Framework, TestNG installation, TestNG Annotations and Listeners, TestNG Example, TestNG Process Execution: Batch, Controlled Batch & Parallel

Text Books:

- 1. Ilene Burnstein, "Practical Software Testing", Springer International Edition, 2003.
- 2. Srinivasan Desikan and Gopalaswamy Ramesh, "Software Testing Principles and Practices", Pearson education, 2009.
- 3. Test Automation using Selenium WebDriver with Java: Step by Step Guide by Navneesh Garg
- 4. Absolute Beginner Java 4 Selenium Webdriver: Come Learn How to Program for Automation Testing by Rex Allen Jones II

Reference Books:

Computer Science

- 1. Elfriede Dustin, "Effective Software Testing", Pearson Education.
- 2. Aditya P. Mathur, "Foundations of Software Testing Fundamental algorithms and techniques", Dorling Kindersley (India) Pvt. Ltd., Pearson Education

Web Links:

https://www.softwaretestingmaterial.com/types-test-automation-frameworks/ https://www.guru99.com/introduction-to-selenium-grid.html#6

SUGGESTED CO-CURRICULAR ACTIVITIES& EVALUATION METHODS:

Unit 1: Activity: Group discussion on software testing challenges and strategies

Evaluation Method: Assessment of participation and contribution

Unit 2: Activity: Assignment on Creation and execution of unit tests

Evaluation Method: Evaluation of accuracy and coverage of unit tests

Unit 3: Activity: Debugging and troubleshooting of test scripts

Evaluation Method: Assessment of problem-solving skills

Unit 4: Activity: Case Study on Analysis and optimization of automated test execution for efficiency

Evaluation Method: Assessment of performance improvement and resource usage

Unit 5: Activity: TestNG report generation and analysis

Evaluation Method: Assessment of report accuracy and insights

Course 706-P: Software Testing Lab using Selenium

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

- 1. Study of software testing tools such as Rational Rose Test Suite, Selenium Tool
- 2. Installation and exploring the Selenium IDE
- 3. Write a script to open google.com and verify that title is Google and verify that it is redirected to google.co.in
- 4. Write a script to open google.co.in using chrome browser (ChromeDriver)

Computer Science

- 5. Write a script to open google.co.in using internet explorer (InternetExplorerDriver)
- 6. Write a script to create browser instance based on browser name
- 7. Write a script to search for specified option in the listbox
- 8. Write a script to print the content of list in sorted order.
- 9. Write a script to print all the options. For duplicates add entry only once. Use HashSet.
- 10. Write a script to close all the browsers without using quit() method.
- 11. Write generic method in selenium to handle all locators and return web element for any locator.
- 12. Write generic method in selenium to handle all locators containing dynamic wait and return web element for any locator.

Computer Science

SEMESTER-VII

Course 707: Advanced Java Programming

(Hours/Week: 03 Total Hours: 45 Credits:03)

Learning Objectives:

To provide students with a comprehensive understanding of Java Enterprise Edition (J2EE) and its associated technologies for developing robust and scalable web applications.

Learning Outcomes: Upon successful completion of the course, students will be able to:

- 1. Understand the multi-tier architecture of J2EE and its implementation in enterprise applications.
- 2. Develop web applications using Java Servlets and establish database connectivity with JDBC.
- 3. Create dynamic and interactive web pages using Java Server Pages (JSP) and implement JSP with beans and custom tag libraries.
- 4. Build enterprise applications using Enterprise Java Beans (EJB) and understand their deployment and configuration.
- 5. Utilize various Java technologies such as JavaMail, CORBA, and Java RMI for effective communication and distributed computing.

UNIT-I

J2EE Overview & Multi-tier Architecture: Overview of J2SE, J2EE, Advantages of Java, BirthofJ2EE, WhyJ2EE; Distributed Systems, The Tier, J2EEMulti-tierarchitecture, Implementation of Client-tier, Web-tier, EJB-tier, and EIS-tier, Challenges; J2EE best practices: Enterprise Application Strategy, The Enterprise Application-Client, Session Management, Web-tierand JSPs, EJB-

Computer Science

tier, MVC, The Mythof Using Inheritance, Maintainable Classes, Performance Enhancement, Power of Interfaces, Threads, and Notification

UNIT -II

Java Servlets & JDBC: Overview of HTML, XML, and XHTML, Java and XML, ParsingXML, Java Servlets and CGI Programming, A Simple Java Servlet, Anatomy of Servlet, LifeCycleoftheServlet,DeploymentDescriptor,Readingdatafromclient,readingHTTPrequestheade rs, working with cookies, Tracking sessions. Overview of JDBC, JDBC Drivers, JDBCPackages,JDBCProcess,DatabaseConnection,Statement,ResultSet,TransactionProcessing,S ervletprogram with JDBC.

UNIT -III

Java Server Pages: Overview of JSP, JSP versus Servlet, JSP Tags: Variables and Objects, Directives, Scripting Elements, Standard Actions, Implicit Objects, Scope, Java Server Pageswith Beans, Tomcat, User Sessions, Cookies, Session Objects, JSP with JDBC, CreatingCustomJSP Tag Libraries.

UNIT-VI

Enterprise Java Beans: The EJB Container, EJB Classes, EJB Interfaces and DeploymentDescriptions: Anatomy, Environment elements, referencing EJB, Sharing resources, Securityelements, Query elements, Relationship elements, Assembly elements. Session Java -statelessvsstateful,EntityJavaBeans-Container-managedpersistence,Bean-managedpersistence.Message-driven Beans, JAR, WAR,EARFiles.

UNIT-V

JavaMail, CORBA and RMI: JavaMail API and Java Activation Framework, Protocols, Exceptions, SendEmailMessage, Retrieving EmailMessages, Deleting EmailMessage. CO RBA: The Concept of Object Request Brokerage, Java IDL and CORBA, The IDLInterface. JavaRMI: Remote Method Invocation Concept, Server Side, and Client Side

Text Books:

Computer Science

- 1. Jim Keogh: J2EE: The Complete Reference. Mc Graw Hill
- 2. H. Schildt: Java 2: The Complete Reference. Mc Graw Hill

Reference Books:

- 1. Kogent Solutions Inc.: Java Server Programming Java EE 7 (J2EE 1.7), Black Book, Dreamtech Press
- 2. Subrahmanyam Allaramaju et al.: Professional JSP J2EE 1.3 Edition. Wrox Press
- 3. K. Qian et al.: Java Web Development Illuminated. Narosa
- 4. Robert W. Sebesta: Programming the World Wide Web. Pearson

Course 707-P: Advanced Java Programming Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

- 1. Study of software testing tools such as Rational Rose Test Suite, Selenium Tool
- 2. Write a Java program to retrieve the information from the given URL?
- 3. Write a java Program to create a servlet to read information from client Registration page
- 4. Write a java Program to create a JSP page to display a simple message along with current Date
- 5. Write a java Program to create a User request page in JSP
- 6. Write the following (JDBC)
 - a. Connect database to Java program
 - b. Program to create database table using Java
 - c. Program to insert, update, delete & select records
 - d. Program to delete record from database
 - e. Program to execute batch of SQL statements
 - f. Program to execute SQL select query
- 7. Write the following (EJB)
 - a. Create stateless bean component
 - b. Create stateless bean client

Computer Science

- 8. JavaMail Example Send Mail in Java using SMTP
- 9. Java RMI Create and execute the server application program

SEMESTER-VII

Course 708: MEAN Stack Development

(Hours/Week: 03 Total Hours: 45 Credits:03)

Learning Objectives:

To provide students with the knowledge and skills necessary to develop web applications using modern web development frameworks and technologies, including JavaScript, Node.js, Express, MongoDB, and AngularJS.

Learning Outcomes: Upon successful completion of the course, students will be able to:

- 1. Gain a comprehensive understanding of web development frameworks, JavaScript fundamentals, and DOM manipulation.
- 2. Develop proficiency in creating Node.js applications, handling data I/O operations, and utilizing events and callbacks.
- 3. Build RESTful services using Node.js and Express framework, mastering HTTP handling and routing.
- 4. Acquire knowledge and skills in working with MongoDB, performing CRUD operations, and utilizing Mongoose for database integration.
- 5. Learn to build single-page applications (SPAs) using AngularJS, implementing two-way data binding and MVC architecture.

UNIT-I

BasicWebDevelopment Framework, Node.js-to-AngularStackComponents

JavaScript Primer: Defining Variables, Understanding JavaScript Data Types, Operators, Looping, CreatingFunctions, VariableScope, JavaScriptObjects, ManipulatingStrings, Wo

Computer Science

rkingwithArrays,AddingErrorHandling,EventsandDocumentObject Model,HandlingJSONdata, Understanding JSONCallbacks.

UNIT-II

Learning Node.js: Getting Started with Node.js, Understanding Node.js, Installing Node.js, Working with Node Packages, Concurrency and event loop fundamentals, Creating a Node.js Application, Using Events, Listeners, Timers, and Callbacks in Nodes.js: Node.js Event Model, Adding Work to the Event Queue, Implementing Callbacks.

UNIT-III

Understanding HTTP Services in Node.js: Processing URLs, Processing Query Strings and Form Parameters, Understanding Request, Response, and Server Objects. Implement HTTPClientsand Servers in Node.Js

Building REST services using Node JS REST services, Installing Express JS, Express Nodeproject structure, Building REST services with Express framework, Routes, filters, templateengines—Jade,ejs.

UNIT-IV

UnderstandingNoSQLandMongoDB:WhyNoSQL?,UnderstandingMongoDB,MongoDB Data Types, MongoDB Basics and Communication with Node JS Installation,CRUDoperations,Sorting,Projection,Aggregationframework,MongoDBindexes,Conn ecting to MongoDB with Node JS, Introduction to Mongoose, Connecting to MongoDBusingmongoose, Defining mongooseschemas, CRUDoperations using mongoose.

UNIT-V

Building Single Page Applications with AngularJS Single Page Application – Introduction, Two-way data binding (Dependency Injection), MVC in Angular JS, Controllers, Getting userinput, Loops, Client side routing – Accessing URL data, Various ways to provide data in Angular JS – Services and Factories, Working with filters, Directives and Cookies, The digest loop and use of \$apply.

Computer Science

Text Books:

- 1. Simon Holmes, "Getting MEAN with Mongo, Express, Angular, and Node", Second Edition, Manning Publications; 1 edition
- Node.js, MongoDB and Angular Web Development, Brad Dayley, Brendan Dayley, Caleb Dayley, Pearson Education Inc., 2nd Edition, 2018

Reference Books:

- 1. Jeff Dickey, "Write Modern Web Apps with Mean Stack", Peachpit press, 2015
- 2. Ken Williamson, "Learning Angular JS", O'Reilly; 1 edition
- 3. Mithun Satheesh, "Web development with MongoDB and Node JS", Packt Publishing Limited; 2nd Revised edition.

SUGGESTED CO-CURRICULAR ACTIVITIES

- 1. Training of students by related industrial experts.
- 2. Assignments
- 3. Seminars, Group discussions, Quiz, Debates etc.(on related topics).
- 4. Building chat application using web socket.
- 5. Build real time dashboard in MEAN stack using websocket
- 6. Develop a CURD APP for College Student Database

Course 708-P: MEAN Stack Development Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

- 1. Installing the Node.js and its dependencies
- 2. Creating a Node.js application
- 3. Implementing http services in Node.js
- 4. Implementing socket services in Node.js
- 5. Create registration and login forms with validations using Jscript query
- 6. Jscript to retrieve student information from student database using database connectivity.

Computer Science

- 7. Building MongoDB environment and managing collection
- 8. Manipulating MongoDB documents from Node.js
- 9. Develop and demonstrate Invoking data using Jscript from Mongo DB.
- 10. Implementing Express in Node.js
- 11. Implement the following in Angular JS
 - a. Angular JS data binding.
 - b. Angular JS directives and Events.
 - c. Using angular JS fetching data from MySQL.
- 12. Understanding Angular and Creating a basic Angular application
- 13. Create an Online fee payment form using JScript and MongoDB.

Computer Science

SEMESTER-VII

Course709: Mobile Application Development

(Hours/Week: 03 Total Hours: 45 Credits:03)

Learning Objectives:

To provide students with a comprehensive understanding of mobile application development using the Android platform.

Learning Outcomes: Upon successful completion of the course, students will be able to:

- 1. Gain a solid understanding of mobile application development principles
- 2. Develop proficiency in setting up the Android development environment
- 3. Acquire the necessary skills to handle and manage Android resources effectively
- 4. Develop expertise in designing user interfaces by utilizing a wide range of UI widgets
- 5. Learn various storage techniques in Android and Understand how to integrate web applications

UNIT-I

Mobile Application Development Introduction, advantages, difference between mobile application, Web application and Hybrid Application.

Android Operating System Introduction, Android Versions with Features, Android Architecture, OHA

UNIT-II

Android Application Development Environment: Introduction of Android Studio, Android SDK, Android Development Tools, Android Virtual Devices, Directory Structure of Android Application, Activity & Application Life Cycle, Anatomy of Android Application, AndroidManifest File

UNIT-III

Computer Science

Android Terminologies & Resource handling Terminologies: Context, Activity, Intent, Service, Broadcast Receiver, Fragment

Resources: Working with Different Types of Resources Like String, Dimen, Integer, Drawable, Color, Style, Material Design etc.

Animation: Tween Animation and Frame by Frame Animation

UNIT-IV

UI Widgets: TextView, Button, EditText, CheckBox, RadioButton & RadioGroup, AutoCompleteTextView, Spinner, ImageView, Seekbar, ProgressBar, Dialogs

Android Layouts, Menu and Views Layouts: Linear Layout, Absolute Layout, Frame Layout, Relative Layout, Constraint Layout Creation of Layout Programmatically Menu: Option, Context Views: Adapters, ListView, ScrollView, WebView, CardView, RecyclerView

UNIT-V

Android Storage Techniques: Shared Preferences, Files & Directories, SQLite Database Connectivity & Operations, Sharing Data Between Application Using Content Providers.

Web Application Integration Techniques and Android APIs: Introduction of JSON, JSON Parsing, Networking API, Telephony API, Web API, Building and Publishing Application to Online Application Store

Text Books:

- 1. Lauren Darcey and Shane Conder "Android Wireless Application Development", 2nd Edition, Pearson Education,
- 2. David Griffiths and Dawn Griffiths, "Head First Android Development: A Brain Friendly Guide", O'Reilly

Reference Books:

- 1. Mark L Murphy, "Beginning Android", Apress, 2011
- 2. Prasanna Kumar Dixit, "Android", Vikas Publishing House Pvt Ltd.

Computer Science

3. David Mark, Jack Nutting, Jeff LaMarch, "Beginning iOS 6 Development", Apress

SUGGESTED CO-CURRICULAR ACTIVITIES& EVALUATION METHODS:

Unit 1: Activity: Mobile App Development Workshop

Evaluation Method: Students' understanding through a practical project where they develop a basic mobile application.

Unit II: Activity: Android Studio Setup and Configuration Session

Evaluation Method: Successful installation and configuration of the Android Studio development environment.

Unit III: Activity: Resource Management Challenge

Evaluation Method: Students' ability to efficiently manage and utilize different types of Android resources through a practical exercise or assignment.

Unit IV: Activity: UI Design Competition

Evaluation Method: Creativity, usability, and implementation of UI designs using various

UI widgets.

Unit V: Activity: Web Integration Hackathon

Evaluation Method: Functionality, user experience, and successful data sharing between the two components during the hackathon.

Course 709-P: Mobile Application Development with Android Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

- 1. Study of various IDEs for Android development
- 2. Setting up Android Studio in Windows
- 3. Develop an application that uses GUI components, Font and Colours
- 4. Develop an application that uses Layout Managers and event listeners.
- 5. Write an application that draws basic graphical primitives on the screen.

Computer Science

- 6. Develop an application that makes use of databases.
- 7. Develop an application that makes use of Notification Manager.
- 8. Implement an application that uses multi-threading.
- 9. Develop a native application that uses GPS location information
- 10. Implement an application that writes data to the SD card.
- 11. Implement an application that creates an alert upon receiving a message
- 12. Write a mobile application that makes use of RSS feed
- 13. Develop a mobile application to send an email.

Computer Science

SEMESTER-VII

Course710:R Programming

(Hours/Week: 03 Total Hours: 45 Credits:03)

Learning Objectives:

To equip students with the knowledge and skills to effectively use R programming language for data analysis, including data manipulation, visualization, and statistical modeling, enabling them to make data-driven decisions and insights.

Learning Outcomes: Upon successful completion of the course, students will be able to:

- 1. Gain a solid understanding of R programming language
- 2. Acquire knowledge and skills in manipulating matrices, lists, and data frames, including performing operations and applying functions.
- 3. Develop the ability to create user-defined functions, handle variable scope, and perform exploratory data analysis, including data preprocessing and descriptive statistics.
- 4. Learn various data visualization techniques in R, including basic and advanced visualizations, as well as creating 3D plots.
- 5. Gain proficiency in inferential statistics and regression analysis using R, including simple linear regression and multiple linear regression.

UNIT-I

Introduction to R- Features of R - Environment - R Studio. Basics of R-Assignment - Modes - Operators - special numbers - Logical values - Basic Functions - R help functions - R Data Structures- Control Structures.

Computer Science

Vectors: Definition- Declaration - Generating - Indexing - Naming - Adding &Removing elements - Operations on Vectors - Recycling - Special Operators - Vectorized if- thenelse-Vector Equality

Functions for vectors - Missing values - NULL values - Filtering & Subsetting.

UNIT-II

Matrices - Creating Matrices - Adding or Removing rows/columns - Reshaping - Operations – Specialfunctions on Matrices.

Lists - Creating List – General List Operations - Special Functions - Recursive Lists.

Data Frames - Creating Data Frames - Naming - Accessing - Adding - Removing - Applying Special functions to Data Frames - Merging Data Frames- Factors and Tables.

UNIT-III

Functions - Creating User-definedfunctions - Functions on Function Object - Scope of Variables - Accessing Global, Environment - Closures - Recursion.

Input / Output – Reading and Writing datasets in various formats

Exploratory Data Analysis - Data Preprocessing - Descriptive Statistics - Central Tendency - Variability - Mean - Median - Range - Variance - Summary - Handling Missingvalues and Outliers - Normalization

UNIT-IV

Data Visualization in R: Types of visualizations - packages for visualizations - Basic Visualizations, **Advanced Visualizations and Creating 3D plots.**

UNIT-V

Inferential Statistics with R - Types of Learning - Linear Regression-Simple Linear Regression - Implementation in R - functions on lm() - predict() - plotting and fitting regression line.

Computer Science

MultipleLinear Regression - Introduction -comparison with simple linear regression - Correlation Matrix - F-Statistic - Target variables Vs Predictors - Identification of significant features - Implementation of Multiple Linear Regression in R.

Text Books:

- 1. Nina Zumel, John Mount, "Practical Data Science with R", Manning Publications, 2014.
- 2. Mark Gardener, "Beginning R The Statistical Programming Language", John Wiley &Sons, Inc., 2012.
- 3. W. N. Venables, D. M. Smith and the R Core Team, "An Introduction to R", 2013.

Reference Books:

- 1. Jure Leskovec, Anand Rajaraman, Jeffrey D.Ullman, "Mining of MassiveDatasets", Cambridge University Press, 2014.
- 2. Nathan Yau, "Visualize This: The Flowing Data Guide to Design, Visualization, and Statistics", Wiley, 2011.

SUGGESTED CO-CURRICULAR ACTIVITIES& EVALUATION METHODS:

Unit 1: Activity: Self Learning through Online resources

Evaluation Method: Online Quiz to access understanding.

Unit II: Activity: Hands-on Lab Session through Datasets

Evaluation Method: Proficiency in manipulating the Datasets.

Unit III: Activity: Data Analysis Competition

Evaluation Method: Students' ability to preprocess data, application of Descriptive Statistics.

Unit IV: Activity: InfographicPresentation on Data Visualization

Evaluation Method: Clarity, effectiveness, and aesthetics of their created visualizations.

Unit V: Activity: Project Work

Evaluation Method: Ability to apply the learnt knowledge.

Course710-P:R Programming Lab

Computer Science

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

- 1. Installing R and R studio
- 2. Installing the "ggplot2", "caTools", "CART" packages and load the packages "ggplot2", "caTools".
- 3. Basic operations in R
- 4. Working with Vectors:
 - a. Create a vector v1 with elements 1 to 20.
 - b. Add 2 to every element of the vector v1.
 - c. Divide every element in v1 by 5
 - d. Create a vector v2 with elements from 21 to 30. Now add v1 to v2.
- 5. Getting data into R, Basic data manipulation
- 6. Using the data present in the table given below, create a Matrix "M" also Find the pairs of cities with shortest distance.

	<i>C1</i>	C2	<i>C3</i>	C4	C5
<i>C1</i>	0	12	13	8	20
C2	12	0	15	28	88
<i>C3</i>	<i>13</i>	15	0	6	9
C4	8	28	6	0	33
C5	20	88	9	<i>33</i>	0

7. Consider the following marks scored by the 6 students

Section	Student no	M1	M2	М3
Α	1	45	54	45
Α	2	34	55	55
Α	3	56	66	64
В	1	43	44	45
В	2	67	76	78
В	3	76	68	37

- a. Create a data structure for the above data and store in proper positions with proper names
- b. Display the marks and totals for all students

Computer Science

- c. Display the highest total marks in each section.
- d. Add a new subject and fill it with marks for 2 sections.
- 8. Loops and functions Find the factorial of a given number
- 9. Implementation of Data Frame and its corresponding operators and functions
- 10. Implementation of Reading data from the files and writing output back to the specified file
- 11. Treatment of NAs, outliers, Scaling the data, etc
- 12. Applying summary() to find the mean, median, standard deviation, etc
- 13. Implementation of Visualizations Bar, Histogram, Box, Line, scatter plot, etc.
- 14. Implementation of Linear and multiple Linear Regression
- 15. Fitting regression line

SEMESTER-VIII

Course801:Big Data Technologies

(Hours/Week: 03 Total Hours: 45 Credits:03)

Learning Objectives:

To providestudents with a comprehensive understanding of Big Data technologies, including Apache Hadoop, Hive, HBase, and Zookeeper, and develop practical skills in data processing, querying, and analytics for large-scale datasets.

Learning Outcomes: Upon successful completion of the course, students will be able to:

- 1. Understand the importance and challenges of Big Data, including its classification and applications.
- 2. Familiarize with Apache Hadoop and learn data movement and MapReduce algorithms.
- 3. Explore Hadoop architecture, including HDFS, MapReduce tasks, and cluster setup.
- 4. Develop skills in Hive and HiveQL for querying and analyzing data in Hadoop.
- 5. Gain proficiency in HBase, including schema design, advanced indexing, and working with Zookeeper for cluster monitoring.

Computer Science

UNIT-I

INTRODUCTION TO BIG DATA: Introduction – Classification of digital data: Structured, Semi structured and unstructured data, Big Data and its importance, Four V's in Big data, Drivers for Big data, Challenges of Big data, Big data analytics and Big data applications.

UNIT-II

INTRODUCTION HADOOP: Big Data – Apache Hadoop & Hadoop Ecosystem – Moving Data in and out of Hadoop – Understanding inputs and outputs of MapReduce - Algorithms using map reduce, Matrix-Vector Multiplication by Map Reduce, Data Serialization.

UNIT-III

HADOOP ARCHITECTURE: Hadoop Architecture, Hadoop Storage: HDFS, Common Hadoop Shell commands, Anatomy of File Write and Read., NameNode, Secondary NameNode, and DataNode, Hadoop MapReduce paradigm, Map and Reduce tasks, Job, TaskTrackers - Cluster Setup – SSH & Hadoop Configuration – HDFS Administering – Monitoring & Maintenance.

UNIT-IV

HIVE AND HIVEQL: Hive Architecture and Installation, Comparison with Traditional Database, HiveQL - Querying Data - Sorting and Aggregating, Map Reduce Scripts, Joins & Subqueries

UNIT-V

HBase concepts- Advanced Usage, Schema Design, Advance Indexing - Zookeeper - how it helps in monitoring a cluster, HBase uses Zookeeper and how to Build Applications with Zookeeper.

Text Books:

1. Big Data Black Book(Covers Hadoop 2, Map Reduce, Hive, Yarn, Pig & Data Visualization) - Dream Tech Publications

Computer Science

2. Big data and Analytics - Seema Acharya and Subhashini Chellappan - Wiley publications.

Reference Books:

- 1. "Understanding Big data", Chris Eaton, Dirk deroos et al., McGraw Hill, 2012.
- 2. "Big Data Analytics", G. Sudha Sadasivam and R. Thirumahal, Oxford University Press 2020.
- 3. "HADOOP: The definitive Guide", Tom White, O Reilly 2012.
- 4. "Big Data Analytics with R and Haoop", Vignesh Prajapati, Packet Publishing 2013.
- 5. "Oracle Big Data Handbook", Tom Plunkett, Brian Macdonald et al, Oracle Press, 2014.

SUGGESTED CO-CURRICULAR ACTIVITIES:

- 1. Arrange expert lectures by IT experts working professionally in the area of Big data
- 2. Assignments
- 3. Seminars, Group discussions, Quiz, Debates etc.
- 4. Presentation by students on various applications of Big data.
- 5. Problem solving exercises.

Course801-P:Big Data Technologies Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

- 1. HDFS: Setup a hdfs in a single node to multi node cluster, perform basic file system operation on it using commands provided, monitor cluster performance
- 2. Write various Map Reduce programs to count the number of times a single word has occurred in a given paragraph.
- 3. Implement the following file management tasks in Hadoop:
 - a. Adding files and directories, List the files and directories
 - b. Retrieving files Deleting files
 - c. Copying files from one folder to another in HDFS
 - d. Copying files from Local File System to HDFS
- 4. Write a Map Reduce program to add two matrices.

Computer Science

- 5. Write a Map Reduce program to multiply a matrix with a Vector.
- 6. Run a basic Word Count Map Reduce program to understand Map Reduce Paradigm
- 7. Write a Map Reduce program that mines weather data (NCDC). Weather sensors collecting data every hour at many locations across the globe gather a large volume of log data, which is a good candidate for analysis with MapReduce, since it is semi structuredandrecord-oriented. (Dataavailableat: ftp://ftp.ncdc.noaa.gov/pub/data/noaa/.)
- 8. Find average, max and min temperature for each year in NCDC data set
- 9. Stop word elimination problem:
 - **Input**: 1. A large textual file containing one sentence per line
 - 2. A small file containing a set of stop words (One stop word per line)

Output:1. A textual file containing the same sentences of the large input file without the words appearing in the small file.

- 10. Write a MapReduce Application to implement Combiners
- 11. Write a MapReduce Application to implement Reduce-side Join
- 12. Write a MapReduce Application to implement Map-side Join
- 13. Hbase: Setup of Hbase in single node and distributed mode, write program to write some data into hbase and query it

SEMESTER-VIII

Course802: Compiler Design

(Hours/Week: 03 Total Hours: 45 Credits:03)

Learning Objectives:

To provide students with a comprehensive understanding of compiler design principles and techniques, including lexical analysis, syntax analysis, intermediate code generation, error handling, storage organization, code generation, and optimization..

Learning Outcomes: Upon successful completion of the course, students will be able to:

1. Understand the compiler structure and the process of lexical analysis using finite automata.

Computer Science

- 2. Acquire knowledge of syntax analysis techniques, including recursive descent parsing, predictive parsing, and LR parsing.
- 3. Learn about syntax-directed translation, intermediate code generation, and error detection and recovery methods in compilers.
- 4. Explore storage organization, dynamic storage allocation, error recovery methods, and code generation issues in compilers.
- 5. Develop an understanding of code optimization techniques, machine-dependent optimization, register allocation, and machine-independent optimization in compilers.

UNIT-I

OverviewoftheCompileranditsStructure:Languageprocessor,Applicationsoflanguageprocessor s,Definition-Structure-Working ofcompiler,the science ofbuildingcompilers,Differencebetweeninterpreterandcompiler.Compilationofsourcecodeintotarg etlanguage,Typesof compilers

Lexical Analysis: The Role of the Lexical Analyzer, Specification of Tokens, Recognition of Tokens, Input Buffering, elementary scanner design and its implementation (Lex), Applyingconceptsof FiniteAutomata for recognition of tokens.

UNIT-II

SyntaxAnalysis: UnderstandingParserandCFG(ContextFreeGrammars),RoleofParser,Parse Tree-EliminationofAmbiguity,LeftRecursion and Left Factoringof grammar

Syntax Analysis-TopDown: TopDownParsing-Recursive DescentParsing-Recursive Descent D

 $Non Recursive Descent Parsing \hbox{-} Predictive \hbox{-} Parsing \hbox{-} LL (1) \hbox{-} Grammars.$

SyntaxAnalysis-BottomUp: ShiftReduceParsers-OperatorPrecedenceParsing-

LRParsers, Construction of SLRParser Tables and Parsing, CLRParsing, LALRParsing

UNIT-III

Syntax Directed Definition – Evaluation Order - Applications of Syntax Directed Translation-Syntax Directed Translation Schemes-Implementation of Lattributed Syntax Directed Definition.

Computer Science

Intermediate Code Generation: Variants of Syntax trees - Three Address Code- Types - Declarations-Procedures-AssignmentStatements-TranslationofExpressions-ControlFlow-BackPatching-SwitchCaseStatements.

UNIT-IV

ErrorRecoveryErrorDetection&Recovery, Ad-HocandSystematicMethodsSourceLanguage Issues, Storage Organization. Stack Allocation of Space, Access to Nonlocal Dataon the Stack, Parameter Passing; Symbol Tables; Language Facilities for Dynamic StorageAllocation;DynamicStorageAllocationTechniques,HeapManagement

UNIT-V

CodeGeneration:IssuesintheDesignofaCodeGenerator,theTargetLanguage,AddressesintheTargetCode,BasicBlocksand Flow Graphs,

CodeOptimization:OptimizationofBasicBlocks, A SimpleCodeGenerator,Machinedependent optimization, Register Allocation and Assignment; The DAG Representation ofBasic Blocks; Peephole Optimization; Generating Code from DAGs; Design of specificationsforcompilers,Machineindependentoptimization Error detection ofrecovery

Text Books:

- 1. A. V. Aho, Monica S. Lam, Ravi Sethi and Jeffrey D. Ullman, Compilers: Principles, techniques, &tools, Second Edition, Pearson Education, 2007.
- 2. K. D. Cooper and L. Torczon, Engineering a compiler, Morgan Kaufmann, 2nd edition, 2011.
- 3. Steven S.Muchnick, Advanced Compiler design implementation" Elsevier Science India, 2003.
- 4. Compiler Design by Muneeswaran, Oxford University Press

Reference Books:

- 1. Andrew A.Appel, Modern Compiler Implementation in Java, Cambridge University Press; 2ndedition, 2002.
- 2. Allen Holub, Compiler Design in C, Prentice Hall, 1990

Computer Science

- 3. TorbengidiusMogensen, Basics of Compiler Design, Springer, 2011.
- 4. Charles N, Ron K Cytron, Richard J LeBlanc Jr., Crafting a Complier, Pearson Education, 2010.

SUGGESTED CO-CURRICULAR ACTIVITIES:

- 1. Training of students by related industrial experts.
- 2. Assignments
- 3. Seminars, Group discussions, Quiz, Debates etc. (on related topics).
- 4. PresentationbystudentsonOnline Compilers and its Architecture
- 5. Implement the back end of the compiler which takes the three-address code and produces the 8086 assembly language instructions that can be assembled and run using an 8086 assembler. The target assembly instructions can be simple move, add, sub, jump etc.

Course802-P:Compiler Design Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

- 1. Implementation of a Lexical Analyzer using tools like Flex or Lex to recognize and tokenize input programs.
- 2. Building a Syntax Analyzer using a parser generator like Bison or YACC to verify the syntactical correctness of the input program.
- 3. Write a LEX program to recognize valid arithmetic expression. Identifiers in the expression could be only integers and operators could be + and *. Count the identifiers & operators present and print them separately.
- 4. Write a LEX program to eliminate comment lines in a C program andcopy the resulting program into a separate file
- 5. Write YACC program to recognize all strings for which starts with 'n' number of 'a's followed by n number of 'b's.
- 6. Write YACC program to recognize valid identifier, operators and keywords in the given text (C program) file.

Computer Science

- 7. Implementation of calculator using lex and YACC.
- 8. Write a C Program to develop an operator precedence parser for a given language.
- 9. Convert the BNF rules into YACC form and write code to generate abstract syntax tree.
- 10. Construct a recursive descent parser for an expression.
- 11. Construct a Shift Reduce Parser for a given language.
- 12. Implement Intermediate code generation for simple expressions

SEMESTER-VIII

Course803:Data Mining Concepts and Techniques

(Hours/Week: 03 Total Hours: 45 Credits:03)

Learning Objectives:

To provide students with a thoroughunderstanding of data warehousing and data mining concepts, techniques, and applications.

Learning Outcomes: Upon successful completion of the course, students will be able to:

1. Understand data warehousing concepts, including data warehouse architecture, multidimensional data models, and OLAP operations.

Computer Science

- 2. Explore the fundamentals of data mining, including its definition, techniques, and applications in real-world scenarios.
- 3. Develop knowledge and skills in clustering techniques, including partitioning algorithms, hierarchical clustering, and categorical clustering.
- 4. Acquire proficiency in decision tree construction and the use of decision tree algorithms for data analysis and prediction.
- 5. Gain exposure to various advanced data mining techniques, such as neural networks, genetic algorithms, and text mining, including web mining concepts and applications.

UNIT - I

Data Warehousing: Introduction, What is Data Warehouse? Definition, Multidimensional Data Model, **OLAP** Operations, Warehouse Schema, Data Warehouse Architecture, Warehouse Server, Metadata, OLAP Engine, Data Warehouse Backend Process, Other Features Data Pre-processing, Descriptive Data Summarization, Data Cleaning, Data Integration and Transformation, Data Reduction, Data Discretization and Concept Hierarchy Generation

UNIT - II

Data Mining: What is Data Mining? Data Mining: Definitions, KDD vs Data Mining, DBMS vs DM, Other Related Areas, DM Techniques, Other Mining Techniques, Issues and Challenges in DM, DM Applications- Case Studies

Association Rules: What is an Association Rule? Methods to Discover Association Rules, A Priori Algorithm, Partition Algorithm, Pincer-Search Algorithm, Dynamic Itemset Counting Algorithms, FP-Tree Growth Algorithm, Discussion on Different Algorithms, Incremental Algorithms, Border Algorithms, Generalized Association Rule, Association Rules with Item Constraints

UNIT - III

Clustering Techniques: Clustering Paradigms, Partitioning Algorithms, k-Medoid Algorithms, CLARA, CLARANS, Hierarchical Clustering, DBSCAN, BIRCH, CURE, Categorical Clustering Algorithms, STIRR, ROCK, CACTUS

UNIT - IV

Computer Science

Decision Trees: What is a Decision Tree? Tree Construction Principle, Best Split, Splitting Indices, Splitting Criteria, Decision Tree Construction Algorithms, CART, ID3, C4.5, Decision Tree Construction with Presorting, Rainforest, Approximate Methods, CLOUDS, BOAT, Pruning Techniques, Integration of Pruning and Construction, Ideal Algorithm

UNIT – V

Other Techniques: What is a Neural Network? Learning in NN, Unsupervised Leaning, Data Mining Using NN: A Case Study, Genetic Algorithms, Rough Sets, Support Vector Machines Web Mining: Web Mining, Web Content Mining, Web Structure Mining, Web Usage Mining, Text Mining, Unstructured Text, Episode Rule Discovery for Texts, Hierarchy of Categories, Text Clustering

Text Books:

- 1. Data Mining Techniques, Arun K Pujari, University Press
- 2. Data Mining: Concepts and Techniques, 3rd Edition, Jiawei Han, Micheline Kamber, Jian Pei

SUGGESTED CO-CURRICULAR ACTIVITIES:

- 1. Arrange expert lectures by IT experts working professionally in the area of Big data
- 2. Assignments
- 3. Seminars, Group discussions, Quiz, Debates etc.
- 4. Presentation by students on various applications of Data Mining.
- 5. Problem solving exercises.

Course803-P:Data Mining Concepts and Techniques Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

- 1. Study of various Open-Source Data Mining Tools
- 2. Build Data Warehouse and Explore WEKA
- 3. Perform data preprocessing tasks and Demonstrate
- 4. Perform association rule mining on data sets

Computer Science

- 5. Demonstrate performing classification on data sets
- 6. Demonstrate performing clustering on data sets
- 7. Demonstrate performing Regression on data sets
- 8. Credit Risk Assessment. Sample Programs using German Credit Data
- 9. Sample Programs using Hospital Management System

SEMESTER-VIII

Course804:Digital Image Processing

(Hours/Week: 03 Total Hours: 45 Credits:03)

Learning Objectives:

To provide students with a comprehensive understanding of digital image processing concepts, techniques, and applications.

Learning Outcomes: Upon successful completion of the course, students will be able to:

1. Understand digital image processing fundamentals and applications in various domains.

Computer Science

- 2. Develop skills in spatial domain image enhancement techniques
- 3. Acquire proficiency in frequency domain image enhancement
- 4. Master in image segmentation techniques
- 5. Learn image compression principles.

UNIT-I

Introduction: Fundamental Steps in Digital Image Processing, Components of an Image Processing System, Sampling and Quantization, Representing Digital Images (Data structure), Some Basic Relationships between Pixels- Neighbors and Connectivity of pixels in image, Applications of Image Processing: Medical imaging, Robot vision, Character recognition, Remote Sensing.

UNIT-II

Image Enhancement in The Spatial Domain: Some Basic Gray Level Transformations, Histogram Processing, Enhancement Using Arithmetic/Logic Operations, Basics of Spatial Filtering, Smoothing Spatial Filters, Sharpening Spatial Filters, Combining Spatial Enhancement Methods.

UNIT-III

Image Enhancement in Frequency Domain: Introduction, Fourier Transform, Discrete Fourier Transform (DFT), properties of DFT, Discrete Cosine Transform (DCT), Image filtering in frequency domain.

UNIT-IV

ImageSegmentation: Introduction, Detection of isolated points, line detection, Edge detection, Edge linking, Region based segmentation- Region growing, split and merge technique, local processing, regional processing, Hough transform, Segmentation using Threshold.

UNIT-V

Image Compression: Introduction, coding Redundancy, Inter-pixel redundancy, image compression model, Lossy and Lossless compression, Huffman Coding, Arithmetic Coding, LZW coding, Transform Coding, Sub-image size selection, blocking, DCT implementation using FFT, Run length coding.

Computer Science

Text Books:

- 1. R. C. Gonzalez and R. E. Woods, Digital Image Processing, 3rd edition, Prentice Hall, 2008.
- 2. Jayaraman, S. Esakkirajan, and T. Veerakumar, "Digital Image Processing", Tata McGraw-Hill Education, 2011.

Reference Books:

- 1. Anil K.Jain, "Fundamentals of Digital Image Processing", Prentice Hall of India, 9th Edition, Indian Reprint, 2002.
- 2. B.Chanda, D.Dutta Majumder, "Digital Image Processing and Analysis", PHI, 2009.

SUGGESTED CO-CURRICULAR ACTIVITIES:

- 1. Arrange expert lectures in the area of Image Processing.
- 2. Assignments related to medical image processing, character recognition, signature recognition, remote sensing image processing, etc.
- 3. Seminars, Group discussions, Quiz, Debates etc. (on related topics).
- 4. Presentation by students on recent trends of Image processing.

Course804-P:Digital Image Processing Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

- 1. Simulation and Display of an Image, Negative of an Image (Binary & Gray Scale)
- 2. Implementation of Relationships between Pixels.
- 3. Implementation of Transformations of an Image
- 4. Contrast stretching of a low contrast image, Histogram, and Histogram Equalization
- 5. Display of bit planes of an Image
- 6. Display of FFT(1-D & 2-D) of an image

Computer Science

- 7. Computation of Mean, Standard Deviation, Correlation coefficient of the given Image
- 8. Implementation of Image Smoothening Filters(Mean and Median filtering of an Image)
- 9. Implementation of image sharpening filters and Edge Detection using Gradient Filters
- 10. Image Compression by DCT, DPCM, HUFFMAN coding
- 11. Implementation of image restoring techniques
- 12. Implementation of Image Intensity slicing technique for image enhancement
- 13. Canny edge detection Algorithm.

SEMESTER-VIII Course805:Information Security and Cryptography

(Hours/Week: 03 Total Hours: 45 Credits:03)

Learning Objectives:

To provide students with a comprehensive understanding of cryptography and network security concepts and their practical applications.

Learning Outcomes: Upon successful completion of the course, students will be able to:

Computer Science

- 1. Demonstrate the knowledge of cryptography, network security concepts and applications.
- 2. Develop security mechanisms to protect computer systems and networks.
- 3. Apply security principles in system design.
- 4. Apply methods for authentication, access control, intrusion detection and prevention.
- 5. Ability to identify and investigate vulnerabilities and security threats and mechanisms to counter them.

UNIT-I

Information Security: Introduction, History of Information security, What is Security, CIA Traid, CNSS Security Model, Components of Information System, Balancing Information Security and Access, Approaches to Information Security Implementation, The Security Systems Development Life Cycle.

Security Attacks (Interruption, Interception, Modification and Fabrication), Vulnerability, Security Services (Confidentiality, Authentication, Integrity, Non-repudiation, access Control and Availability) and Mechanisms.

UNIT-II

Cryptography: Concepts and Techniques, Conventional substitution and transposition ciphers, One-time Pad, Blockcipher and Stream Cipher, Symmetric and Asymmetric key cryptography, Steganography

Symmetric key Ciphers: DES structure, DES Analysis, Security of DES, variants of DES, Block cipher modes of operation, AES structure, Analysis of AES, Key distribution.

UNIT-III

Asymmetric key Ciphers: Principles of public key cryptosystems, RSA algorithm, Analysis of RSA, Diffie-Hellman Key exchange, Elliptic Curve Cryptography.

Message authentication and Hash Functions, Authentication Requirements and Functions, Message Authentication, Hash Functions and MACs Hash and MAC Algorithms SHA-512, HMAC.Digital Signatures, Authentication Protocols, Digital signature Standard.

UNIT-IV

Computer Science

Program Security: Secure programs, Non-malicious Program errors, Malicious codes virus, Trap doors, Salami attacks, Covert channels, Control against program.

IP Security:Overview, IP Security Architecture, Authentication Header, Encapsulating Security Payload, Combining Security Associations and Key Management.

Email Security: Pretty Good Privacy (PGP) and S/MIME.

UNIT-V

Web Security: Web Security Requirements, Secure Socket Layer (SSL) and Transport Layer Security (TLS), Secure Electronic Transaction (SET).

Intruders, Virus and Firewalls: Intruders, Intrusion detection, password management, Virus andrelated threats, Countermeasures, Firewall design principles, Types of firewallsWireless Security, Honeypots, Traffic flow security.

Text Book(s)

- 1. **Principles of Information Security**: *Michael E. Whitman, Herbert J. Mattord*, CENGAGE Learning, 4th Edition.
- 2. **Cryptography And Network Security Principles And Practice**, Fourth or Fifth Edition, *William Stallings*, Pearson
- 3. **Security in Computing**, Fourth Edition, by *Charles P. Pfleeger*, Pearson Education

Reference Books

- 1. **Modern Cryptography: Theory and Practice**, by *Wenbo Mao*, Prentice Hall.
- 2. **Network Security Essentials**: **Applications and Standards**, by *William Stallings*. Prentice Hall.
- 3. **Principles of Information Security**, *Whitman*, Thomson.
- 4. **Cryptography and Network Security**: Forouzan Mukhopadhyay, Mc Graw Hill, 2nd Edition

SUGGESTED CO-CURRICULAR ACTIVITIES:

1. Training of students by related industrial experts.

Computer Science

- 2. Assignments
- 3. Seminars, Group discussions, Quiz, Debates etc. (on related topics).
- 4. Presentation by students on emerging Cyber frauds
- 5. Case Studies of Various Cryptographic Algorithms

Course805-P:Information Security and Cryptography Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

- 1. Write a Java Program to implement Ceaser Cipher
- 2. Write a Java Program to implement Playfair Cipher
- 3. Write a Java Program to implement Railfence Cipher
- 4. Write a Java Program to implement Hill Cipher with 2 x 2 Matrix
- 5. Write a Java Program to implement DES algorithm
- 6. Write a Java Program to implement RSA algorithm
- 7. Write a Java Program for Diffie-Hellman Key Exchange
- 8. Write a Java Program to Generate SHA-512 Hash of a file
- 9. Write a Java Program to implement Digital Signature with a File
- 10. Configuring S/MIME for email communication
- 11. Setup a honeypot and monitor the honeypot on the network
- 12. Demonstrate how to provide secure data storage, secure data transmission and for creating digital signatures (GnuPG)
- 13. Perform wireless audit on an access point or a router and decrypt WEP and WPA (Net Stumbler)
- 14. Demonstrate intrusion detection system (ids) using any tool (snort or any other s/w)

Computer Science

SEMESTER-VIII

Course806:Mobile Ad hoc and Sensor Networks

(Hours/Week: 03 Total Hours: 45 Credits:03)

Learning Objectives:

To provide students with a comprehensive understanding of ad hoc wireless networks, including their fundamentals, protocols, and security mechanisms.

Computer Science

Learning Outcomes: Upon successful completion of the course, students will be able to:

- 1. Understand the concept of ad-hoc and sensor networks, their applications and typical node and network architectures.
- 2. Describe the MAC protocol issues of ad hoc networks.
- 3. Identify and describe routing protocols for ad hoc wireless networks with respect to TCP design issues.
- 4. Explain the concepts of network architecture and MAC layer protocol for WSN.
- 5. Familiar with the OS used in Wireless Sensor Networks and build basic modules.

UNIT-I

Introduction to Ad Hoc Wireless Networks: Fundamentals of Wireless Communication Technology, The Electromagnetic Spectrum, Radio propagation Mechanisms, Characteristics of the Wireless channel, Cellular and Ad Hoc Wireless Networks, Characteristics of MANETs, Applications of MANETs, Issues and Challenges of MANETs, Ad Hoc Wireless Internet

UNIT-II

MAC Protocols for Ad Hoc Wireless Networks: Introduction, Issues in Designing a MAC protocol for Ad Hoc Wireless Networks, Design goals of a MAC Protocol for Ad Hoc Wireless Networks, Classifications of MAC Protocols, Contention - Based Protocols, Contention - Based Protocols with reservation Mechanisms, Contention - Based MAC Protocols with Scheduling Mechanisms, MAC Protocols that use Directional Antennas, Other MAC Protocols.

UNIT-III

Routing Protocols for Ad Hoc Wireless Networks: Issues in Designing a Routing Protocol, Classifications of Routing Protocols-Table driven protocols- Destination Sequenced Distance Vector (DSDV), Wireless Routing Protocol (WRP), On-demand routing protocol-Dynamic Source Routing (DSR), Ad Hoc On-Demand Distance Vector Routing (AODV), Hybrid routing protocols-Zone Routing Protocol (ZRP)

UNIT-IV

Transport layer and Security Protocols for Ad hoc Wireless Networks: Introduction, issues in Designing a Transport Layer Protocol for Ad Hoc Wireless Networks. Classification of

Computer Science

Transport Layer Solutions. TCP Over Ad Hoc Wireless Networks, Other Transport Layer Protocol for Ad Hoc Wireless Networks.

Security protocols: Security in Ad hoc Wireless Networks, Network Security Requirements, Issues and Challenges in Security Provisioning, Network Security Attacks, Key Management, Secure Routing in Ad hoc Wireless Networks, Cooperation in MANETs, Intrusion Detection Systems.

UNIT-V

Basics of Wireless Sensors and Applications: The Mica Mote, Sensing and Communication Range, Design Issues, Energy Consumption, Clustering of Sensors, Applications, Data Retrieval in Sensor Networks-Classification of WSNs, MAC layer, Routing layer, Transport layer, Highlevel application layer support, Hardware-Components of Sensor Mote, Sensor Network Operating Systems—TinyOS, CONTIKIOS, Node-level Simulators — NS2 and its extension to sensor networks, COOJA, TOSSIM

Text Book(s)

- 1. C. Siva Ram Murthy and B. S. Manoj, "Ad Hoc Wireless Networks Architectures and Protocols", Prentice Hall, PTR, 2004.
- 2. Holger Karl, Andreas willig, "Protocol and Architecture for Wireless Sensor Networks", John Wiley publication, Jan 2006.

Reference Books

- 1. Feng Zhao, Leonidas Guibas, "Wireless Sensor Networks: an information processing approach", Elsevier publication, 2004.
- 2. Charles E. Perkins, "Ad Hoc Networking", Addison Wesley, 2000.
- 3. I.F. Akyildiz, W. Su, Sankarasubramaniam, E. Cayirci, "Wireless sensor networks: a survey, computer networks", Elsevier, 2002, 394 422.

SUGGESTED CO-CURRICULAR ACTIVITIES:

Computer Science

- 1. Training of students by related industrial experts.
- 2. Assignments
- 3. Seminars, Group discussions, Quiz, Debates etc. (on related topics).
- 4. Presentation by students on various Network Simulators
- 5. Case Studies of Various Applications of Ad hoc and Sensor Networks

Course806-P:Mobile Ad hoc and Sensor Networks Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

All the experiments should be done on any Network Simulator like NS-2/NS-2/OMNET++/OPNET etc.

- 1. Study various network simulators used for wireless Ad-Hoc and Sensor Networks.
- 2. Introduction to TCL scripting: demonstration of one small Wireless network simulation script.
- 3. Study various trace file formats of network simulators.
- 4. Implement and compare various MAC layer protocols.
- 5. Generate TCL script for UDP and CBR traffic in WSN nodes.
- 6. Generate TCL script for TCP and CBR traffic in WSN nodes.
- Implement and compare AODV and DSR routing algorithms in MANET for various parameters.
- 8. Implement DSDV routing algorithms in MANET.
- 9. Calculate and compare average throughput for various TCP variants.
- 10. Implement and compare various routing protocols for wireless sensor networks.
- 11. Study Ethereal / Wireshark software and analyze dump files.

Computer Science

SEMESTER-VIII

Course807:Advanced Database Management Systems

(Hours/Week: 03 Total Hours: 45 Credits:03)

Learning Objectives:

To provide students with a Through theoretical knowledge and practical application of advanced topics in database management systems.,

Computer Science

Learning Outcomes: Upon successful completion of the course, students will be able to:

- 1. Gain understanding of relational database concepts, functional dependencies, and correctness of FDs.
- 2. Analyze and apply normalization techniques (3NF, BCNF, 4NF, 5NF)
- 3. Develop skills in processing joins, grasp materialized vs. pipelined processing
- 4. Learn principles of correct interleaved execution, locking mechanisms (2PL), handle deadlocks.
- 5. Acquire knowledge of T/O-based techniques, multi-version approaches

UNIT-I

Formal review of relational database concepts, Functional dependencies, Closure, Correctness of FDs

UNIT-II

3NF and BCNF, 4NF and 5NF, Decomposition and synthesis approaches, Review of SQL99, Basics of query processing, external sorting, file scans

UNIT-III

Processing of joins, materialized vs. pipelined processing, query transformation rules, DB transactions, ACID properties, interleaved executions, schedules, serializability

UNIT-IV

Correctness of interleaved execution, Locking and management of locks, 2PL, deadlocks, multiple level granularity, Concurrency Control on B+ trees, Optimistic Concurrency Control and the concepts related to Global and Local transactions in Distributed transactions.

UNIT-V

T/O based techniques, Multiversion approaches, Comparison of Concurrency Control methods, dynamic databases, Failure classification, recovery algorithm, XML and relational databases

Text Book(s)

- 1. R. Ramakrishnan, J. Gehrke, Database Management Systems, McGraw Hill, 2004
- 2. A. Silberschatz, H. Korth, S. Sudarshan, Database system concepts, 5/e, McGraw Hill, 2008.

Computer Science

Reference Books

3. Hector Garcia-Molina, Jeff Ullman, and Jennifer Widom, "Database Systems: The Complete Book", Pearson, 2011.

SUGGESTED CO-CURRICULAR ACTIVITIES:

- 1. Performance tuning approaches by subject matter experts
- 2. Assignments
- 3. Seminars, Group discussions, Quiz, Debates etc.(on related topics).
- 4. Creating different kinds of indexes in Oracle and MySQL databases and compare the performance
- 5. Case study on the need for 2PLand transactional controls

Course807-P:Advanced Database Management Systems Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

- 1. Running Basic SQL commands
- 2. Understanding the use of Intermediate SQL
- 3. Running Advanced SQL related to data mining (Slicing and Dicing)
- 4. Creation of ER and EER diagrams for an organization
- 5. Database Design and Normalization for a given organization
- 6. Accessing Databases from Programs using JDBC
- 7. Analyzing query performance using explain plans
- 8. Creation of indexes for better query performance.
- 9. Running different query evaluation plans
- 10. Experimenting on DBMS locks and session management

SEMESTER-VIII

Course808:Cloud Computing

(Hours/Week: 03 Total Hours: 45 Credits:03)

Learning Objectives:

Computer Science

To provide students with a comprehensive understanding of cloud computing concepts, virtualization technologies, and different service models in the context of cloud computing.

The course will explore the origins, components, and essential characteristics of cloud

- **Learning Outcomes:** Upon successful completion of the course, students will be able to:
 - 1. Understand the essential characteristics and benefits of cloud computing

computing, along with the benefits and limitations associated with its adoption

- 2. Gain knowledge of virtualization technologies
- 3. Explore Microsoft implementation of virtualization andunderstand different cloud deployment models and their advantages.
- 4. Learn about Infrastructure as a Service (IaaS) and Platform as a Service (PaaS) models,
- 5. Explore Software as a Service (SaaS) and its service providers.

UNIT-I

Cloud Computing Overview – Origins of Cloud computing – Cloud components - Essential characteristics – On-demand self-service, Broad network access, Location independent resource pooling, Rapid elasticity, Measured service. Cloud scenarios – Benefits: scalability, simplicity, vendors, security. Limitations – Sensitive information - Application development – Security concerns - privacy concern with a third party - security level of third party - security benefits Regularity issues: Government policies.

UNIT-II

Virtualization: Virtualization and cloud computing - Need of virtualization - cost, administration, fast deployment, reduce infrastructure cost - limitations

Types of hardware virtualization: Full virtualization - partial virtualization - para virtualization

Desktop virtualization: **Software virtualization** - Memory virtualization - Storage virtualization, **Data virtualization** - **Network virtualization**

UNIT-III

Microsoft Implementation: Microsoft Hyper V, VMware features and infrastructure – Virtual Box - Thin client

Computer Science

Cloud deployment model: Public clouds – Private clouds – Community clouds - Hybrid clouds - Advantagesof Cloud computing

UNIT-IV

Infrastructure as a Service (IaaS): IaaS service providers – Amazon EC2, GoGrid, Rack Space, Windows Azure infrastructure services – Amazon EC service level agreement – Recent developments – Benefits

Platform as a Service (PaaS): PaaS service providers – Right Scale – Salesforce.com – Force.com – Oracle APEX cloud - Services and Benefits

UNIT-V

Software as a Service (SaaS): SaaS service providers – Google App Engine, Salesforce.com and google platform – Benefits – Operational benefits - Economic benefits – Evaluating SaaS

Text Book(s)

 Mastering Cloud Computing, Foundations and Application Programming, Raj Kumar Buyya, Christenvecctiola, S Tammaraiselvi, TMH

Reference Books

- 1. Cloud computing a practical approach Anthony T.Velte , Toby J. Velte Robert Elsenpeter TATA McGraw- Hill , New Delhi 2010
- Cloud Computing: Web-Based Applications That Change the Way You Work and Collaborate Online - Michael Miller - Que 2008
- 3. Cloud Computing, Theory and Practice, Dan C Marinescu, MK Elsevier.
- 4. Cloud Computing, A Hands on approach, ArshadeepBahga, Vijay Madisetti, University Press
- 5. AWS, Azure and Saleforceweb tutorials

SUGGESTED CO-CURRICULAR ACTIVITIES:

- 1. Training of students by Skill Development Centres
- 2. Hands-on Lab Sessions on Open Public Clouds

Computer Science

- 3. Assignments, Seminars, Group discussions, Quiz, Debates etc.(on related topics).
- 4. Case Studies on operations that can be performed on IaaS, PaaS and SaaS providers

Course808-P:Cloud Computing Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

- 1. Setup virtual machines on a single computer using VMWare and VirtualBox
- 2. Create a network using multiple virtual machines on a single host using VMware
- 3. Setup a client server interaction on a single host using VMware
- 4. Create an AWS account and create an EC2 instance with a C compiler
- 5. Connect to EC2 instance and run some C programs on EC2 instance
- 6. Install a web server on an EC2 instance and provide access to it using Security Group rules
- 7. Create a virtual cloud on EC2 platform
- 8. Connect to Force.com and create a data entry form using Salesforce APEX
- 9. Create a new account on Saleforce.com and create leads, quotes and contracts
- 10. Analyze the services available on Oracle APEX and create sample web applications

SEMESTER-VIII

Course809: Computer Vision

(Hours/Week: 03 Total Hours: 45 Credits:03)

Learning Objectives:

Computer Science

To equip the students with the knowledge and skills to analyze and interpret images, detect and recognize objects, estimate motion, and apply computer vision techniques in various domains such as biometrics, medical image analysis, surveillance, and augmented reality.

Learning Outcomes: Upon successful completion of the course, students will be able to:

- 1. Understand the fundamental concepts of computer vision and its applications in various domains.
- 2. Apply color and geometric transforms, edge-detection techniques, filtering, and mathematical operations to analyze images.
- 3. Comprehend the concept of motion estimation and its applications.
- 4. Apply shape correspondence, shape matching, principal component analysis, and shape priors for object recognition.
- 5. Explore various applications of computer vision

UNIT-I

Introduction to Computer Vision: Image Processing, Computer Vision and Computer Graphics, Computer Vision Applications: Document Image Analysis, Biometrics, Object Recognition, Tracking, Medical Image Analysis, Content-Based Image Retrieval, Video Data Processing, Multimedia, Virtual Reality and Augmented Reality

UNIT-II

Image Representation And Analysis: Image representation, Image processing techniques like colorand geometric transforms, Edge-detection Techniques, Filtering, Mathematical operations on image and its applications like convolution, filtering

UNIT-III

Motion Estimation:Introduction to motion, Regularization theory, Optical computation, Stereo Vision, Motion estimation, Structure from motion and models

UNIT-IV

Computer Science

Object Recognition: Hough transforms and other simple object recognition methods, Shapecorrespondence and shape matching, Principal component analysis, Shape priors for recognition

UNIT-V

Applications: Photo album, Face detection, Face recognition, Eigen faces, Active appearance and 3Dshape models of faces Application: Surveillance, foreground background separation, particle filters, Chamfer matching, tracking, and occlusion, combining views from multiple cameras, human gaitanalysis Application: Invehicle vision system: locating roadway, road markings, identifying roadsigns, locating pedestrians

Text Book(s)

- 1. Computer Vision A modern approach, by D. Forsyth and J. Ponce, Prentice Hall
- 2. Robot Vision, by B. K. P. Horn, McGraw-Hill.
- 3. E. R. Davies, Computer & Machine Vision, Fourth Edition, Academic Press, 2012

Reference Books

- 1. Introductory Techniques for 3D Computer Vision, by E. Trucco and A. Verri, Publisher: PrenticeHall.
- 2. D. H. Ballard, C. M. Brown. Computer Vision. Prentice-Hall, Englewood Cliffs.
- 3. Richard Szeliski, Computer Vision: Algorithms and Applications (CVAA). Springer, 2010
- 4. Image Processing, Analysis, and Machine Vision. Sonka, Hlavac, and Boyle. Thomson.
- Simon J. D. Prince, Computer Vision: Models, Learning, and Inference, Cambridge UniversityPress, 2012

SUGGESTED CO-CURRICULAR ACTIVITIES:

- 1. Student Seminar on Applications of Computer Vision
- 2. Hands-on Lab Sessions on Computer Vision Techniques
- 3. Assignments, Seminars, Group discussions, Quiz, Debates etc.(on related topics).
- 4. Project Work

Computer Science

Course809-P:Computer Vision with OpenCV Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

- 1. Import libraries
- 2. RGB image and resizing
- 3. Grayscale image
- 4. Image denoising, Image thresholding, Image gradients
- 5. Edge detection fourier transform on image
- 6. Line transform
- 7. Corner detection
- 8. Morphological transformation of image, Geometric transformation of image
- 9. Contours
- 10. Image pyramids
- 11. Color space conversion and object tracking
- 12. Interactive foreground extraction
- 13. Image segmentation, Image inpainting
- 14. Template matching
- 15. Face and eye detection

SEMESTER-VIII Course810:Digital Forensics

(Hours/Week: 03 Total Hours: 45 Credits:03)

Learning Objectives:

Computer Science

To equip students with the knowledge and skills necessary to effectively handle digital investigations, ensuring the preservation, analysis, and presentation of digital evidence in a legally sound manner.

Learning Outcomes: Upon successful completion of the course, students will be able to:

- 1. Gain a clear understanding of the fundamentals of digital forensics
- 2. Develop knowledge and skills in analyzing storage media and file systems
- 3. Learn about network forensics and acquire practical skills in network packet sniffing, analysis using tools like Wireshark and TCPDUMP
- 4. Gain expertise in logs and event analysis, data carving
- 5. Develop proficiency in wireless and web attacks.

UNIT-I

Introduction to Digital Forensic: Definition of Computer Forensics, Cyber Crime, Evolution of Computer Forensics, Objectives of Computer Forensics, Roles of Forensics Investigator, Forensics Readiness, Steps for Forensics

Computer Forensics Investigation Process: Digital Forensics Investigation Process-Assessment Phase, Acquire the Data, Analyze the Data, Report the Investigation

Digital Evidence and First Responder Procedure: Digital Evidence, Digital Evidence Investigation Process. First Responders Toolkit, Issues Facing Computer Forensics, Types of Investigation, Techniques in digital forensics

UNIT-II

Understanding Storage Media and File System: The Booting Process, LINUX Boot Process, Mac OS Boot Sequence, Windows 10 Booting Sequence, File System, Type of File Systems.

Windows Forensics: Introduction to Windows Forensics, Windows Forensics Volatile Information, Windows Forensics Non- Volatile Information, Recovering deleted files and partitions, Windows Forensics Summary.

Usage of Slack space, tools for Disk Imaging, Data Recovery, Vulnerability Assessment Tools, Encase and FTK tools: **FTK Imager:**

ANDHRA PRADESH STATE COUNCIL FOR HIGHER EDUCATION

FOUR YEAR B.SC. (HONS) SYLLABUS UNDER CBCS W.E.F. 2023-2024

Computer Science

Digital Forensics Road map: Static Data Acquisition from windows using FTK Imager, Live Data Acquisition using FTK Imager

Installation of KALI Linux, RAM Dump Analysis using Volatility, Static Data Acquisition from Linux OS

UNIT-III

Recovering Deleted Files and Partitions: Digital Forensics Tools, Overview of EnCase Forensics, Deep Information Gathering Tool: Dmitry Page, Computer Forensics Live Practical by using Autopsy and FTK Imager

Network Forensics: Introduction to Network Forensics, Network Components and their forensic importance, OSI internet Layers and their Forensic importance, Tools Introduction Wireshark and TCPDUMP, Packet Sniffing and Analysis using Ettercap and Wireshark, Wireshark Packet Analyzer, Packet Capture using TCP DUMP

Website Penetration: WHOIS, nslookup

UNIT-IV

Logs & Event Analysis: Forensic Analysis using AUTOPSY: Linux and Windows, Forensics and Log analysis, Compare and AUDIT Evidences using Hashdeep Page

Data Carving using Bulk Extractor: Kali Linux and Windows, Recovering Evidence from Forensic Images using Foremost

Application Password Cracking: Introduction to Password Cracking, Password Cracking using John the Ripper, Password Cracking using Rainbow Tables, PDF File Analysis, Remote Imaging using E3 Digital Forensics

UNIT-V

Wireless and Web Attacks: WiFi Packet Capture and Password Cracking using Aircrack ng, Introduction to Web Attacks, Website Copier: HTTRACK, SQL Injection, Site Report Generation: Netcraft, Vulnerability Analysis: Nikto, Wayback Machine, Image Metadata Extraction using Imago

Email Forensics Investigation: Email Forensics Investigations, **Mobile Device Forensics:** Mobile Forensics

Computer Science

Preparation for Digital Forensic investigation: Investigative reports, expert witness and cyber regulations, Introduction to Report Writing, Forensic Reports & Expert Witness

Text Book(s)

- 1. **Digital Forensics**, *Dr. Jeetendra Pande*, *Dr. Ajay Prasad*, Uttarakhand Open University, Haldwan 2016
- 2. Nilakshi Jain, Dhananjay Kalbande, "Digital Forensic: The fascinating world of Digital Evidences" Wiley India Pvt Ltd 2017.
- 3. Cory Altheide, Harlan Carvey"Digital forensics with open source tools" Syngress Publishing, Inc. 2011.
- 4. *Chris McNab*, **Network Security Assessment**, By O'Reilly.

Reference Books

- 1. Jason Luttgens, Matthew Pepe, Kevin Mandia, "Incident Response and computer forensics", 3rd Edition Tata McGraw Hill, 2014.
- 2. Clint P Garrison, "Digital Forensics for Network, Internet, and Cloud Computing A forensic evidence guide for moving targets and data", Syngress Publishing, Inc. 2010

SUGGESTED CO-CURRICULAR ACTIVITIES:

- 1. Training of students by related industrial experts.
- 2. Assignments
- 3. Seminars, Group discussions, Quiz, Debates etc. (on related topics).

Computer Science

4. Case Studies: Vulnerability Assessment of Your College Website

Course810-P:Digital Forensics Lab

(Hours/Week: 02 Total Hours: 30 Credits:01)

List of Experiments:

- 1. Study of Computer Forensics and different tools used for forensic investigation
- 2. How to Recover Deleted Files using Forensics Tools
- 3. Study the steps for hiding and extract any text file behind an image file/ Audio file (Steganography)
- 4. How to Extract Exchangeable image file format (EXIF) Data from Image Files using Exifreader Software
- 5. Data Acquisition using FTK imager
- 6. How to make the forensic image of the hard drive using EnCase Forensics/Autopsy
- 7. How to Restoring the Evidence Image using EnCase Forensics/Autopsy
- 8. How to Collect Email Evidence in Victim PC
- 9. How to Extracting Browser Artifacts
- 10. How to View Last Activity of Your PC
- 11. Find Last Connected USB on your system (USB Forensics)
- 12. Comparison of two Files for forensics investigation by Compare IT software
- 13. Live Forensics Case Investigation using Autopsy
